CHIEF ECONOMIST BILL ANDERSON

PRESS RELEASE

For Immediate Release
October 25, 2016

The Unemployment Rates Decline in September in Nevada's Metro Areas

CARSON CITY, NV — In September, unemployment rates in all three of the Silver State's major population centers fell more than one percentage point over the year, in addition to experiencing a drop of 0.4 percentage point each over the month. Carson City and Las Vegas were home to unemployment rates of 5.6 percent, both down from August's rate of 6 percent. In Reno/Sparks, unemployment stood at 4.5 percent in September, down from 4.9 percent in August, a decrease of 1.3 percentage points from the same month last year. As reported last week, the statewide unemployment rate fell to a seasonally adjusted 5.8 percent.

In addition to the major metropolitan areas, unemployment rates are also down across all 17 counties in Nevada, ranging from a low of 4.1 percent in Elko to a high of eight percent in Mineral.

"Despite monthly volatility in job growth, the metro areas continue to experience positive economic improvement," said Bill Anderson, chief economist for the Research and Analysis Bureau of Nevada's Department of Employment, Training and Rehabilitation. "All three of the state's largest population centers saw annual gains in employment."

NEVADA SUB-STATE LABOR MARKET OVERVIEW

September 2016

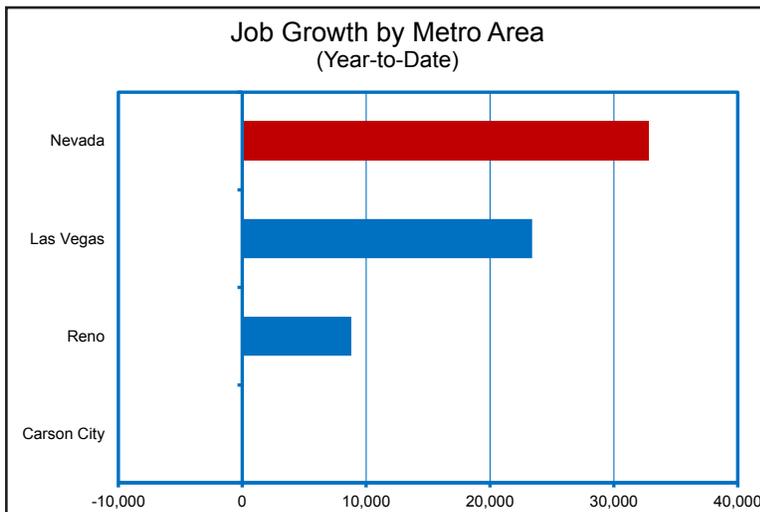

Nevada's largest population centers experienced mixed job growth in September after a seasonally adjusted decrease of 1,500 jobs Statewide. The Las Vegas Metropolitan Statistical Area (MSA) absorbed the brunt of the loss after only adding 2,200 payrolls when 6,600 were expected to be gained due to seasonal movement. This resulted in a seasonally adjusted loss of 4,400 jobs for the area. Carson City employment remained steady as actual job losses matched the expected seasonal drop of 100. Reno/Sparks realized some improvement by gaining 2,800 jobs when only 1,100 were

Nevada Nonfarm Jobs: August - September Change

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Las Vegas	2,200	6,600	-4,400
Reno	2,800	1,100	1,700
Carson City	-100	-100	0

expected to be added, resulting in a seasonally adjusted employment gain of 1,700.

Despite some volatility over the month, all three of the Silver State's largest population centers saw year-over-year gains in payrolls. Las Vegas grew at 2.2 percent, an increase of 20,300 payrolls since September of 2015. Goods-producing industries in the area added 7,800 jobs while service providers gained 13,100¹. Carson City realized slight gains with 100 new jobs over the year, a growth rate of 0.4 percent. This growth corresponds to 300 new jobs for service providers and 200 less goods-producing jobs. Finally, Reno/Sparks grew at 5.3 percent over the year, almost twice the growth rate of the State as a whole during that time

¹ References to total MSA employment are adjusted for seasonality, whereas references to goods-producing and service-providing industries are not.

(2.7 percent), and gained 11,200 jobs. This growth resulted in a gain of 500 goods-producing and 9,300 service-providing jobs.

In recognition of October's designation as "Manufacturing Month", this month we highlight labor market information related to the manufacturing industry. Statewide, 3.3 percent of all nonfarm employment was in manufacturing in September (not seasonally adjusted). In Las Vegas, manufacturing accounted for 2.3 percent of employment, with 21,900 people employed in the industry. In Reno/Sparks the proportion jumped to 5.6 percent, with 12,600 employed. Carson City had the highest rate of manufacturing employment at 9.2 percent, or 2,600 total jobs in the industry

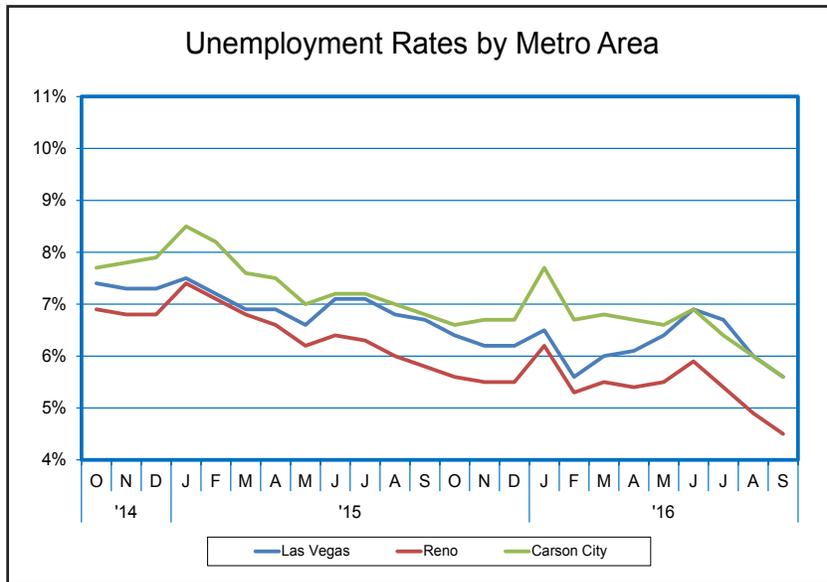

Establishment data from the Quarterly Census of Employment and Wages (QCEW) show that the number of private sector business establishments in Nevada grew by 10.4 percent between the first quarter of 2010 and the first quarter of 2016, resulting in a net increase of 7,550 business establishments Statewide. Throughout the State, eight of 17 counties saw increases, while one county (Lander) remained at the same level, and the remaining eight counties experienced a decline in the number of business establishments. Esmeralda, Clark, and Storey grew

the fastest at 18.2, 14.2, and 11.1 percent, respectively, while Mineral and Nye decreased the most at 18.4 and 4.5 percent. As for Nevada's major population centers, Clark grew faster than the State at 14.2 percent. Washoe grew at a slower rate, 5.1 percent, while Carson City private sector establishment counts declined by 3.9 percent.

Data from the QCEW program also give us insight into small business employment in the Silver State. As of the first quarter of 2016, employment in small businesses (firms with less than 100 employees) accounted for 53.5 percent of total private sector employment in Nevada. In fact, small business establishments were responsible for more than half of total employment in 13 of 17 counties. The lowest rates were found in Eureka and Lander at 7.3 percent and 36.9 percent, respectively. This is certainly attributable to the presence of large mining operations in these counties. In Esmeralda and Lincoln Counties, 100 percent of employment was in establishments with less than 100 employees. As for Nevada's major population centers, Clark County small business employment came in at 50.2 percent, slightly below the Statewide average. Carson City held 75.7 percent and Washoe County was at 62.6 percent, both higher than in the State as a whole.

The Census Bureau's Local Employment Dynamics (LED) Program offers insight into underlying economic trends by producing a collection of enhanced labor market statistics. Among other things, LED information allows for an analysis of new-hire earnings as well as earnings from jobs lost.

The latest available information from 2015:IIQ suggests that new-hire earnings in Nevada are 94 percent of the earnings of those jobs lost (separations). Average new-hire earn-

county (Storey) experienced no change. Six of those counties (Washoe, Lyon, Elko, Churchill, White Pine, and Eureka) realized year-to-date declines of ten percent or more. Clark County, which represents more than three-fourths of Nevada's initial claims, experienced the largest nominal decline of 5,100. Only two counties, Esmeralda and Pershing, witnessed year-to-date increases in the number of initial claims, albeit extremely minimal.

ings in Carson City are 89 percent of earnings for jobs lost, the lowest ratio in the Silver State. This is most likely attributable to the key role that State Government plays in the regional economy. This sector of the economy has a very structured pay scale in which, typically, new hires are made at the low end of the pay scale and workers gradually progress to higher wages over time.

In September, unemployment rates in all three of the Silver State's major population centers were down by more than one percentage point over the year, in addition to experiencing a drop of 0.4 percentage point each over the month². Carson City and Las Vegas were home to unemploy-

New-hire earnings are higher than earnings of jobs lost in five (mostly rural) counties: Lander, Eureka, Esmeralda, Humboldt, and Storey. This could be attributed to factors such as labor force composition, industry mix, possible skills gaps, and difficulties in attracting workers.

Initial claims for unemployment insurance continue to show considerable declines across much of the State. Through September, 14 of Nevada's 17 counties saw year-to-date declines in initial claims, while one

	September 2016 (Year-to-Date)		Change
	2016	2015	
Clark	86,825	91,931	-5,106

Storey	43	43	0
Esmeralda	26	25	1
Pershing	105	100	5

*County level totals are not directly comparable to Statewide monthly totals due to reporting differences.

² The state's seasonally adjusted unemployment rate is 5.8 percent in September, down from 6.3 percent in August and down from 6.6 percent in September 2015. Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons however, can be made to the State's unadjusted rate - 5.4 percent in September, down from 5.8 percent in August and down from 6.6 percent in September 2015.

ment rates of 5.6 percent, both down from August's rate of six percent. For Carson City, the drop corresponds to a 1.2 percentage point decrease over the year, while in Las Vegas the over-the-year decline was 1.1 percentage points. In Reno/Sparks, unemployment stood at 4.5 percent in September vs. 4.9 percent in August, a decrease of 1.3 percentage points from the same month last year.

In addition to the major metropolitan areas, unemployment rates are also down across all 17 counties in Nevada, ranging from a low of 4.1 percent in Elko to a high of eight percent in Mineral. Eureka and Churchill had the largest month-over-month drops, at 0.9 percentage point and 0.7 percentage point respectively, while four counties (Storey, Pershing, Lyon, and Mineral) experienced drops of 0.6 percentage point. Elko, Lander, and Esmeralda were home to the smallest changes,

each decreasing unemployment by 0.3 percentage point in September. The remaining counties all experienced 0.4 percentage point decreases in unemployment over the month.

Year-to-date online job posting activity³ is up in all 17 of Nevada's counties. Clark experienced the largest increase with 117,800 total job ads so far in 2016, a gain of 7,500 over last year. Washoe's job ads increased by 5,500 since this time last year, bringing the total to 31,600. Carson City has received 6,300 job ads so far this year, a gain of 1,800 over last year. Storey county job ads have increased by over 200 percent since last year, with 100 postings so far in 2016, a gain of 70 from 2015.

	September Online Job Postings (Year-to-Date)		Change
	2016	2015	
Clark	117,843	110,299	7,544
