PRESS RELEASE

For Immediate Release
 Dec. 20, 2016

Nevada's Metro Areas See Decrease in Unemployment Rate in November

CARSON CITY, NV—All three of Nevada's metro areas saw a decrease in the rate of unemployment in November. The rate in Las Vegas fell to 5.1 percent, while the rate in the Reno/Sparks area decreased to 4.2 percent. The Carson City unemployment rate is down to 5.3 percent.

Additionally, all three metro areas saw job growth, said Bill Anderson, chief economist for the Research and Analysis Bureau of Nevada's Department of Employment, Training and Rehabilitation. Las Vegas added a seasonally adjusted 900 jobs, while Reno/Sparks realized a seasonally adjusted employment gain of 800. Over-the-year job gains were also positive for the state and all three metropolitan areas. Nevada gained 34,700 jobs over the year, a growth rate of 2.7 percent, while seeing the unemployment rate fall to 5.2 percent.

"The metro areas followed the statewide trend in unemployment in November," Anderson said. "They continue to show positive signs of recovery with good news being reported in all economic barometers. Over the year, unemployment is down statewide and in the metro areas, which is a better indicator of the labor market than monthly statistics."

ABOUT THE RESEARCH AND ANALYSIS BUREAU

The Research and Analysis Bureau is Nevada's premier source for labor market information. A part of DETR, the Bureau is responsible for creating, analyzing, and reporting Nevada's labor market information, in cooperation with the United States Bureau of Labor Statistics (BLS).

DETR is comprised of the Employment Security Division, Equal Rights Commission, Rehabilitation Division, and the Research and Analysis Bureau. DETR oversees the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices. It also supports economic development efforts through improving Nevada's workforce.

NEVADA SUB-STATE LABOR MARKET OVERVIEW

November 2016

The Current Employment Statistics (CES) program provides a timely estimate of employment for Nevada's three metropolitan statistical areas (MSAs) and the State as a whole, based on a monthly payroll survey of Nevada businesses. This month, along with Statewide job gains, Nevada's largest population centers all saw increased employment levels. The Las Vegas MSA gained 3,600 jobs over the month. Since only 2,700 new jobs were expected to be added due to seasonal movements, Las Vegas increased employment by a seasonally adjusted 900 jobs. In Reno/Sparks, 800 jobs were expected

Nevada Nonfarm Jobs: October - November Change

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Las Vegas	3,600	2,700	900
Reno	1,600	800	800
Carson City	100	-100	200

due to seasonal movements but 1,600 were gained in total, resulting in a seasonally adjusted employment gain of 800. Carson City was expected to lose 100 jobs due to seasonal movements but actually gained 100; this resulted in a seasonally adjusted increase in employment of 200 for the area.

Over-the-year job gains were also positive for the State and all three metropolitan areas. Nevada gained 34,700 jobs over the year, a growth rate of 2.7 percent. In the MSAs, Las Vegas experienced the largest nominal gain of 19,000 jobs, a growth rate of 2.1 percent. Specifically, 8,300 jobs were gained in goods-producing industries while 10,800 service providing jobs were added¹. Carson City gained 300 jobs since this time last year,

¹ References to total MSA employment are adjusted for seasonality, whereas references to goods-producing and service-providing industries are not.

a growth rate of 1.1 percent. In Carson City, 400 service-providing jobs were gained while 100 goods-producing jobs were lost. Finally, Reno/Sparks gained 8,900 jobs over the year, resulting in a growth rate of 4.2 percent. This corresponds to 8,100 new service-providing jobs and 800 new goods-producing jobs.

The Quarterly Census of Employment and Wages (QCEW) Program publishes the most accurate, albeit less-timely, measure of jobs. It represents a comprehensive count of employment and wages based on information reported by all businesses covered under the Unemployment Insurance System. Unlike the monthly estimates from CES, QCEW data is available for all Nevada counties on a quarterly basis.

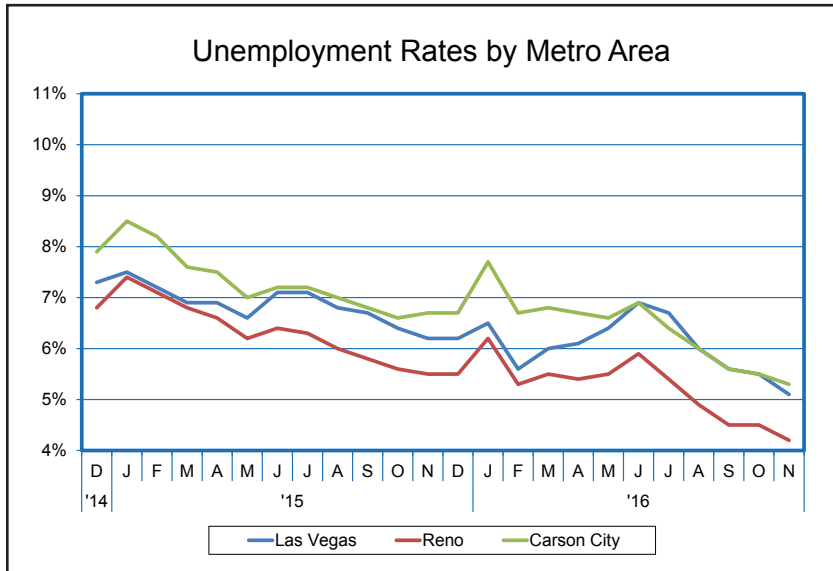

The most recent QCEW information shows that total employment in Nevada as a whole increased 3.1 percent from 2015:IIQ to 2016:IIQ. Twelve of Nevada's 17 counties saw job gains over the year. Growth rates ranged from a low of -7.1 percent in Esmeralda to a high of 32 percent in Mineral County. Storey (20 percent) and Lincoln (5 percent) also saw strong growth. As for Nevada's major population centers, Carson City, at 1.1 percent, grew below the Statewide average. Clark experienced a growth rate equal

to the the Silver State, at 3.1 percent. Washoe grew faster than the State as a whole, at 4.2 percent.

The most recent QCEW data also gives us insight into wages in Nevada. In the second quarter of 2016, Nevada wages averaged \$874 per week, an increase of 2.3 percent from the same time last year. In the counties, weekly wages ranged from \$660 (Lincoln) to \$1,660 (Eureka). In addition to Eureka, the only counties with payrolls above \$1,000 per week were Lander, Esmeralda, and Humboldt at \$1,320, \$1,020, and \$1,010 respectively.

This can be attributed to the high concentration of mining jobs in these counties, accounting for more than half of total employment. As for Nevada's major population centers, Clark's wages grew 2.5 percent to \$870 per week, just below the State average. Carson City (\$880) and Washoe (\$880) sat right above the average weekly wage for the Silver State. Wages in Carson City increased 1.6 percent from 2015:IIQ, while in Washoe the growth rate was higher at 2.1 percent.

Data from the Census Bureau's Longitudinal Employer-Household Dynamics Program (LED) allows an analysis of the gender of the workforce in Nevada by county. Information from the third quarter of 2015 shows that females accounted for 48 percent of Nevada's workforce, with males accounting for 52 percent. The gender makeup of the workforce in Nevada's two major population centers was very similar to the Statewide norm. Washoe's workforce was 48 percent female and 52 percent male, identical to the State as a whole. Forty-nine percent of Clark's workforce was female and 51 percent male. Eureka, Esmeralda, and Lander had the highest percentage of male workers. This is attributable to the presence of large mining operations in these counties. Statewide, more than 85 percent of the workforce in the mining sector was

year-to-date decline of -7,950.

Following the decline in Statewide unemployment in November to 5.2 percent, all three metro areas in Nevada saw decreases in the jobless rate both over the month and, more importantly, over the year. Unemployment in Las Vegas dropped to 5.1 percent, down 0.4 percentage point from October and 1.1 percentage points from November of last year². In Reno/Sparks, the jobless rate dropped to 4.2 percent; a decline of 0.3 percentage point

from last month and 1.3 percentage point from last year. Finally, Carson City's unemployment rate stood at at 5.3 percent, down 0.2 percentage points from October and down 1.4 percentage points over the year. Significantly, all three metro areas have decreased

male. Carson City was one of just two counties in which females accounted for more than half of the workforce (51 percent). This is likely due to the relatively large portion of females in the public administration sector, the region's largest employer. Specifically, 53 percent of the public administration workforce in the region was female. That compares to just a 47 percent share for females in the public administration sector in the State as a whole.

On a county level, initial claims for unemployment insurance continued to see declines in the month of November. Year-to-date, all of Nevada's counties have now seen initial claims levels drop below their respective totals through November of 2015. Twelve of these counties have experienced declines of at least 10 percent, led by Eureka, which has seen claims fall by nearly 50 percent in 2016. Clark, which represents more than 75 percent of Nevada's initial claims, has seen the largest nominal

² The State's seasonally adjusted unemployment rate is 5.2 percent in November, down from 5.5 percent in October and down from 6.4 percent in November 2015. Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate - 5.0 percent in November, down from 5.3 percent in October and down from 6.2 percent in November 2015.

	Unemployment Insurance Initial Claims By County		
	November Initial Claims (Year-to-Date)		Change
	2016	2015	
Clark	106,056	114,001	-7,945
Washoe	16,512	18,891	-2,379
Lyon	2,440	3,013	-573
Elko	1,618	1,876	-258
Churchill	863	1,055	-192
Carson City	2,510	2,648	-138
Nye	1,429	1,567	-138
Douglas	1,540	1,677	-137
Humboldt	630	734	-104

Pershing	129	147	-18
Storey	50	68	-18
Lincoln	126	142	-16
Esmeralda	31	33	-2

*County level totals are not directly comparable to Statewide monthly totals due to reporting differences.

unemployment by more than one percentage point over the year.

In addition to the metro areas, all 17 of the Silver State’s counties realized declines in the unemployment rate in November. Pershing saw the largest over-the-month drop, down a full percentage point to 4.7 percent. Strikingly, three counties held unemployment rates below four percent in November—Eureka (3.7 percent), Esmeralda (3.7 percent) and Elko (3.8 percent). Lyon and Nye had the highest unemployment rates for the month, at 6.2 and 6.6 percent, respectively. Mineral held the third highest jobless rate in November, at 5.8 percent, but has gained the most ground over the year, shaving four full percentage points off the rate from this time last year. November marks the first time since September 2007 that the unemployment rate in all Nevada counties is below 7 percent.

Year-to-date online job posting activity is up

in all 17 Nevada counties this month, with Clark, Washoe, and Carson City continuing to lead the way in total job ads³. There have been 142,600 online job ads for positions in Clark County so far in 2016, an increase of 8,800 over this time last year. Washoe’s online job ad activity has increased by 7,000 over last year, resulting in 38,600 total ads year to date. Carson City has realized an increase of 2,400 ads over last year, totaling 7,900 through November.

Online Job Posting Activity by County			
	November Online Job Postings (Year-to-Date)		Change
	2016	2015	
Clark	142,550	133,740	8,810
Washoe	38,587	31,893	6,694
Carson City	7,889	5,504	2,385
Douglas	3,699	2,526	1,173
Elko	5,256	4,086	1,170
Churchill	2,439	1,622	817
Lyon	2,351	1,652	699

Eureka	287	102	185
Esmeralda	171	57	114
Lander	414	327	87
Storey	132	53	79
Pershing	333	277	56

³ Online job postings are obtained through DETR’s Silver State Solutions initiative. Online job posting volume does not necessarily correlate with the level of job openings or hiring. Internal company hiring and union hiring are often not captured by online ads. High ad volume often occurs for occupations/industries that are having difficulty finding qualified candidates, high turnover positions/recurring openings, or when companies are building large candidate pools. Online job postings should only be used with caution when developing/analyzing time series trends due to the constant changes in the rate of online advertising usage and in the methods used for collecting the data.
