DETR's RESEARCH AND ANALYSIS BUREAU
CHIEF ECONOMIST BILL ANDERSON

For Immediate Release
July 20, 2012

Nevada's Unemployment Rate Remains at 11.6 Percent in June

June showed no change in Nevada's unemployment rate, which held steady at a seasonally adjusted 11.6 percent. While not directly comparable to the state figure, the unemployment rate in each of the state's three metropolitan areas saw a slight seasonal increase, which is to be expected, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation (DETR).

The state is experiencing steady job growth. In June, the state saw a seasonally adjusted gain of 200 jobs in the private sector compared to May. Relative to a year ago, private sector job readings are up 17,500 in June, the strongest gain recorded so far in 2012, Anderson said. For the entire first half of the year, 14,000 jobs have been added in Nevada's private sector establishments. This is on top of approximately 12,000 new jobs in 2011.

"This month's employment numbers indicate the economy is continuing to grow at a slow but modest pace," Governor Brian Sandoval said. "I am encouraged by the fact that this is the 12th straight month of positive news, but we must continue working to support job growth by bringing new business to Nevada and allowing existing businesses to be successful."

Las Vegas continues to hold the highest jobless rate amongst the state's three population centers, at 12.1 percent, up from 11.8 percent in May. In Reno, the unemployment rate stood at 11.7 percent, up from May's 11.5 percent reading. Carson City's unemployment rate, at 11.8 percent, is up from 11.6 percent. Lander (5.7 percent on a year-to-date basis), Esmeralda (6.1 percent), and Eureka (6.2 percent) continue to have the lowest unemployment rates in the State. Lyon (16 percent so far this year) and Nye (14.8 percent) have the highest jobless rates.

The decline in the unemployment rate over the past year, translates to a decline of 26,000 unemployed individuals relative to the first half of 2011, Anderson said. Through the first six months of this year, the number of unemployed in the state has averaged 163,900.

"Renewed job growth in the state's largest industry, leisure/hospitality, driven largely by more than two years of nearly non-stop visitation gains in southern Nevada, has been well-publicized," Anderson said. "Since reaching a recessionary low of a seasonally adjusted 304,500 in November 2009, nearly 20,000 jobs have been added in this industry."

Other industries are also exhibiting some modest improvement. Professional/business services jobs stand 5,000 higher than a year ago in June. This marks the 26th month out of the past 27 that a year-over-year gain has been recorded. Health care/social assistance jobs are up by a seasonally adjusted 1,200 from May-June, and stand 3,100 higher than a

year ago. Trade/transportation/utilities jobs have increased nearly non-stop since late-2010, but growth has been constrained, hovering at less than two percent on an annualized basis.

“While we did not see much change for the month, we are still encouraged that the economy is indeed on the mend,” said DETR Director Frank Woodbeck about June’s unemployment numbers. “The rate of unemployment is still unacceptably high, and we are diligently working to do what we can on our end to further propel us in the right direction. Our goal is to attract diverse businesses to the state to provide broader employment opportunities, especially since the construction industry continues to lag greatly.”

Anderson said construction jobs remained unchanged from May, but are off by 3,300 through the first half of the year relative to 2011. Continued difficulties in the financial activities sector are at least partially related to the weakness in construction. An additional 1,700 jobs have been lost in these establishments relative to June 2011, he said.

NEVADA LABOR MARKET OVERVIEW June 2012

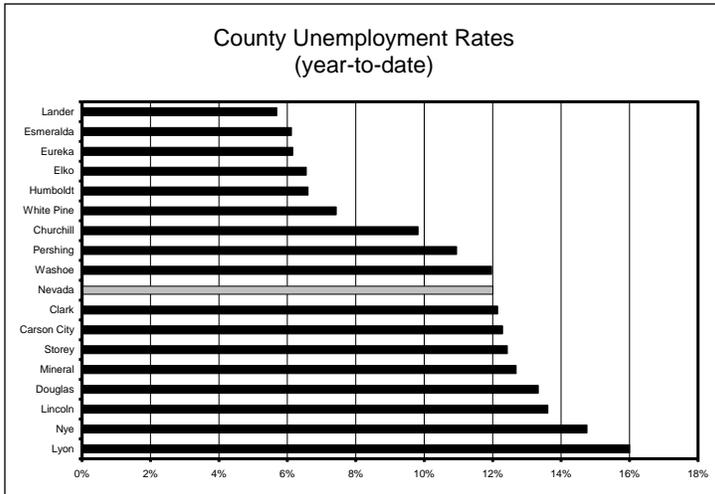

Two of the broadest measures of Nevada's economic health have been released in recent weeks by the Bureau of Economic Analysis in the U.S. Department of Commerce. Each suggests that the State's economy is expanding at a moderate pace as Nevada continues to recover from the recession. Nevada's Gross Domestic Product (GDP), a measure of total production in the State, rose for the second straight year in 2011 following declines in 2008 and 2009. GDP grew at a 1.2 percent clip in 2011, up from 0.3 percent the prior year. In 2011, Nevada was one of just seven states to see the pace of economic growth improve from 2010. Still, the level of economic activity remains below pre-recession peaks.

At the same time, personal income information has been made available for 2012:IQ. It shows that income grew 1.8 percent on an annualized basis in the first three months of the year, which marks the eighth straight quarter of growth. This follows six consecutive quarters in which personal income declined. Double-digit growth was recorded in both 2004 and 2005.

All things considered, Nevada's labor market appears to be improving in a manner that is quite consistent with the modest gains reported for the economy as a whole referenced above. Nevada's unemployment rate and the overall jobs picture in June are essentially unchanged over the month, but show noticeable improvement when measured against year-ago readings.

At a seasonally adjusted 11.6 percent, June's unemployment rate is unchanged from May and remains stubbornly high, despite more than a two-point drop from a year ago. Through the first six months of this year, the number of unemployed in the State has averaged 163,900. This translates into a decline of

26,000 relative to the first half of 2011.

While not directly comparable to the State's seasonally adjusted figure, the unemployment rate in each of the state's three metropolitan areas rose marginally in June.¹ Las Vegas remains home to the highest jobless rate amongst the State's three population centers, at 12.1 percent, up from 11.8 percent in May. The Reno metro area came in with an

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	-2,800	-1,800	-1,000
Private Sector	2,900	2,700	200
Public Sector	-5,700	-4,500	-1,200
Las Vegas	-4,400	-3,600	-800
Reno	-800	200	-1,000
Carson City	0	100	-100

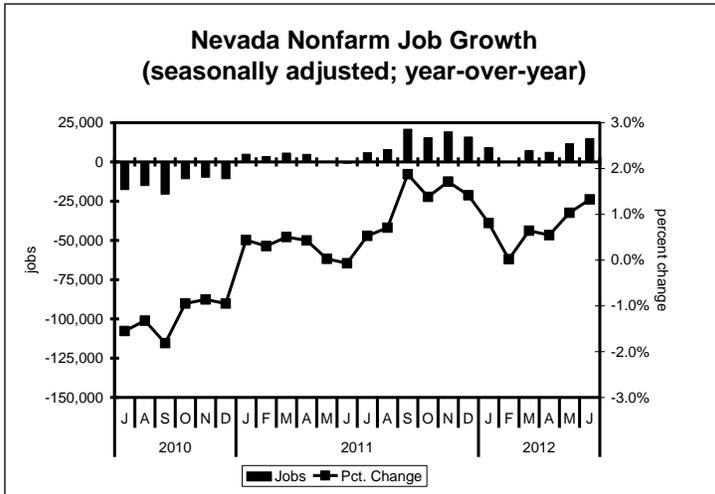

Totals may not sum due to rounding

¹ Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 11.9 percent in June, up from 11.6 percent in May and 14 percent in June 2011.

11.7 percent jobless rate, up from May's 11.5 percent reading. Carson City's unemployment rate, at 11.8 percent, is up from 11.6 percent. In all three regions, some improvement is evident measured against a year ago. For instance, the Las Vegas area's jobless rate stands 2.3 percentage points below June 2011.

Lander (5.7 percent on a year-to-date basis), Esmeralda (6.1 percent), and Eureka (6.2 percent) continue to have the lowest unemployment rates in the State. Lyon (16 percent so far this year) and Nye (14.8 percent) have the highest jobless rates.

Prior to seasonal adjustment, June job readings are down by 2,800 relative to May levels, whereas a decline of 1,800 was expected, given normal seasonal patterns evident over time. The end result is a net loss of 1,000 on a seasonally adjusted basis, a more valid month-to-month comparison as it discounts recurring seasonal trends, which do not necessarily reflect the underlying strength of the labor market. Still, the overall trend appears to be modestly positive, as job levels are up 14,800 relative to a year ago. This marks the 12th straight month, and the (17th time in 18 months) that a year-over-year gain has been recorded. Prior to that, job declines were recorded in 35 consecutive months.

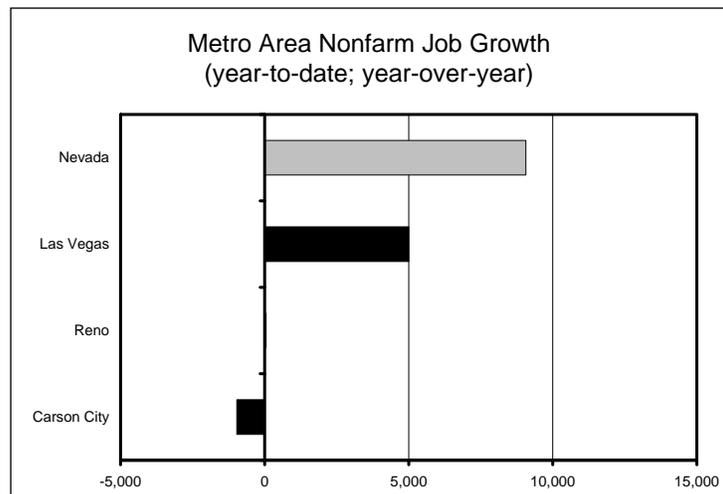

the private sector continues to lead the way. June brought with it a seasonally adjusted gain of 200 jobs compared to May. Relative to a year ago, private sector job readings are up 17,500 in June, the strongest gain recorded so far in 2012. For the entire first half of the year, 14,000 jobs have been added in Nevada's private sector establishments. This is on top of approximately 12,000 new jobs in 2011.

This is not to say that the State's economy is operating on all cylinders. Trends differ across regions, industries, and demographic groups. For instance, although the latest information available is from mid-2011, the number of jobs held by teens in Nevada has been cut by more than half since the pre-recession peak, from 46,000 jobs to 20,000. (This information is based upon official wage records, and does not capture other, more informal, jobs typically held by teens—childcare, various odd jobs, etc.)

Renewed job growth in the State's largest industry, leisure/hospitality, driven largely by more than two years of nearly non-stop visitation gains in southern Nevada, has been well-publicized. Since reaching a recessionary low of a seasonally adjusted 304,500 in November 2009, nearly 20,000 jobs have been added in this industry.

Looking at the various components of a more broadly-defined tourism/gaming/entertainment sector highlights some interesting trends

Southern Nevada is outpacing the north. While no clear trends are evident in the June results, Las Vegas shows a net gain of 5,000 jobs in the first half of the year, relative to the same period in 2011. In the Reno metro area, year-to-date results are essentially unchanged from last year, while Carson City is down by 1,000 jobs.

For the State as a whole,

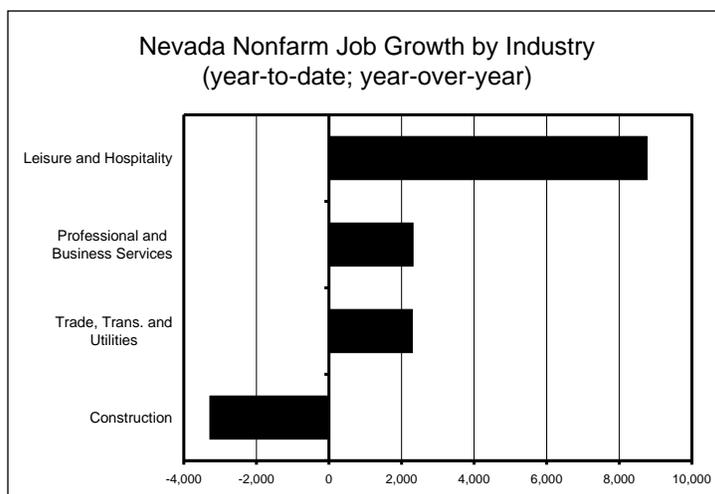

over the past decade. The traditional gaming component of the sector, mainly casino hotels and other casinos, shed more than 25,000 jobs in the decade ending in 2011. Other sub-sectors, however, showed solid results. Food and drinking establishments added 33,700 jobs. The retail and non-casino lodging sub-sectors each added about 7,000 jobs over the same period. This evidence suggests that the sector as a whole has been diversifying away from traditional gaming activities and into other business lines.

Other industries are also exhibiting some modest improvement. Professional/business services jobs stand 5,000 higher than a year ago in June. This marks the 26th month out of the past 27 that a year-over-year gain has been recorded. Health care/social assistance jobs are up by a seasonally adjusted 1,200 from May-June, and stand 3,100 higher than a year ago. Trade/transportation/utilities jobs have increased nearly non-stop since late-2010, but growth has been constrained, hovering at less than

two percent on an annualized basis.

Some industries continue to lag, however. Construction, at least as it pertains to job levels, is still searching for a bottom. Although unchanged from May, construction jobs are off by 3,300 through the first half of the year relative to 2011. Continued difficulties in the financial activities sector are at least partially related to the weakness in construction. An additional 1,700 jobs have been lost in these establishments relative to June 2011.

As an aside, recent measures of residential construction/real estate markets show signs of improvement. Residential permitting activity is up 38 percent through May in the State, while new housing starts are up nearly 30 percent. Resale activity in southern Nevada has recorded 16 consecutive months of year-over-year gains. While these trends have been encouraging, it is important to note that the markets are rising off of historical lows, so recent improvement must be kept in perspective.

While the private sector as a whole is exhibiting signs of growth, the public sector continues to trail. While June typically brings with it a decline in jobs, mostly related to the end of the traditional academic calendar year, this year's decline was more pronounced than expected, resulting in a seasonally

adjusted loss of 1,200 jobs in June, relative to May.

Going back to our discussion on teen employment, two industries, accommodation/food services and retail trade, account for nearly two-thirds of all jobs held by teenagers in Nevada. In the year ending in 2011:IIQ, 8,900 Nevadans between the ages of 14 and 18 worked in the former, while 4,800 worked in retail establishments.

Much has been made of late about an apparent slowdown in job growth reported on the first Friday of every month for the nation as a whole. Growth during the second quarter of the year did ease considerably from

the first three months of 2012. On the plus side, however, as we've illustrated in the past, a number of structural indicators do point to an improving labor market nationwide. For instance, prior to the recession, roughly 4-5 million people per month were classified as working part-time for "economic reasons." In essence, they would have rather been working full-time hours, but slack business/economic conditions prevented them from doing so. During the recession, this barometer of the labor market's health reflected the deteriorating economy, and peaked at around nine million workers. Of late, though, it has been inching off of those highs, to about 8.2 million workers in June.
