CHIEF ECONOMIST BILL ANDERSON

PRESS RELEASE

For Immediate Release
December 21, 2012

Nevada's Unemployment Rate Drops to 10.8 Percent

Nevada's unemployment rate for November fell to 10.8 percent, the lowest it has been in more than three years.

Las Vegas's rate fell to 10.4 percent, while Reno dropped to 9.9 percent. Reno metro area's unemployment rate is the first single-digit November reading since 2008, down from 12.1 percent a year ago. The Las Vegas region registered a decline of 2.6 percentage points from 2011. In Carson City, the unemployment rate in November fell to 10.3 percent, down over two points from a year ago, and 0.4 point relative to October.

"This month's 10.8 percent unemployment rate is the lowest since March 2009 and private sector employment reached the one-million mark for the first time since March 2009," Governor Brian Sandoval said. "While this is good news, there is much work to be done. In order to continue to grow our state's economy, we must continue to diversify, recruit new businesses to Nevada and help retrain workers still looking for employment."

For the first 11 months of the year, the jobless rate has averaged 11.7 percent, down from 13.6 percent during the same period in 2011, said Bill Anderson, chief economist for the Nevada Department of Employment, Training and Rehabilitation.

"The news on the jobs front in November is especially encouraging," Anderson said. "Typically, job readings decline slightly, by 1,200, over the October-November period. This November, however, job readings actually increased by 8,000. The end result is a seasonally adjusted gain of 9,200, the most pronounced monthly increase since April 2005. In addition, monthly job growth equaled or exceeded November's gain just nine times since 1990. For the year, employment is up 8,600 relative to the first 11 months of last year."

NEVADA LABOR MARKET OVERVIEW November 2012

When combined with a number of other barometers of the State's economic health (taxable sales, gaming win, visitation, employer growth, etc.), November's labor market fundamentals are fairly encouraging, with notable improvement on a number of different fronts. Arguably, November results overstate the health of the job market. For instance, the jobless rate is estimated to have declined 0.7 percentage point from October, a trend that is certainly unsustainable going forward. Given the volatility evident in these estimates over time, we continue to urge caution in placing too much weight on one month's results. We are, however, quite comfortable in concluding that the State's labor markets continue to behave in a manner consistent with moderate improvement over time.

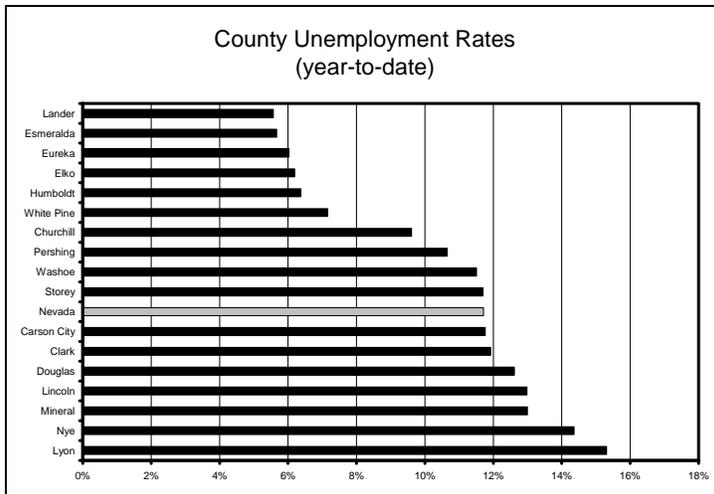

With that said, November's unemployment rate, at a seasonally adjusted 10.8 percent, is the lowest reading since March 2009. For the first 11 months of the year, the jobless rate has averaged 11.7 percent, down from 13.6 percent during the same period in 2011. As we've discussed previously, the

current estimates suggest that the labor force in the State is trending down. Specifically, these estimates suggest that the labor force has declined by 20,600 so far in 2012 relative to a year ago.

Hypothetically, had the labor force held steady, thereby resulting in an increase in 2012 estimates of unemployment by the same 20,600, the unemployment rate so far this year would have averaged 13 percent.

When originally reported, 2011 estimates also showed a significant decline in the labor force, even more pronounced than this year's. However, those original estimates were subsequently revised upward by about 70,000, leaving labor force levels essentially unchanged from 2010. It would not be surprising to

the Reno metro area's unemployment rate is the first single-digit November reading since 2008. It is down from 12.1 percent a year ago. The Las Vegas region registered a decline of 2.6 percentage points from 2011, as the jobless rate currently stands at 10.4 percent. In Carson City, the unemployment rate in November settled at 10.3 percent, down over two points from a year ago, and 0.4 point relative to October.

see similar revisions, at least in terms of scope, unfold this time around as well.

While not directly comparable to the State information reported above, non-seasonally adjusted unemployment rates fell or held steady in all but two counties in November¹. More importantly, every county but one in the State recorded a year-over-year decline. Declines ranged from -0.3 percentage point in Lander to -3.1 points in Storey and Nye. Lyon County, at 13.6 percent, remains home to the highest rate, but it is down 2.5 points from 2011. Only Mineral County saw its unemployment rate increase over the year, from 11.1 percent to 12.5 percent

As for the State's three largest population centers, at 9.9 percent,

The number of employers participating in the State's Unemployment Insurance Program is on the rise, based upon information available through the third quarter. Following three straight years of declines, the number of employers is up two percent so far this year. Year-over-year gains have been recorded in each of the past five quarters.

The news on the jobs front in November is especially encouraging. Typically, job readings hold relatively steady over the October-November period, at least in total. (Specifically, we would expect a slight decline of about 1,200 jobs in November.) This November, however, job readings actually increased by 8,000. The end result is a seasonally adjusted gain of 9,200, the most pronounced monthly increase since April 2005. In addition, monthly job growth equaled or exceeded November's gain just nine times since 1990. For the year, employment is up 8,600 relative to the first 11 months of last

¹ Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 10.2 percent in November, down from 10.9 percent in October and 12.7 percent in November 2011.

Nevada and Sub-State Nonfarm Jobs: Oct. - Nov. Change			
	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	8,000	-1,200	9,200
Private Sector	8,100	-1,400	9,500
Public Sector	-100	200	-300
Las Vegas	3,800	1,100	2,700
Reno	3,300	-200	3,500
Carson City	100	0	100

year. As noted in previous *Overviews*, we expect that the likely result of the annual benchmarking process to take place early in 2013 will be an upward revision in job estimates to the tune of at least a few thousand.

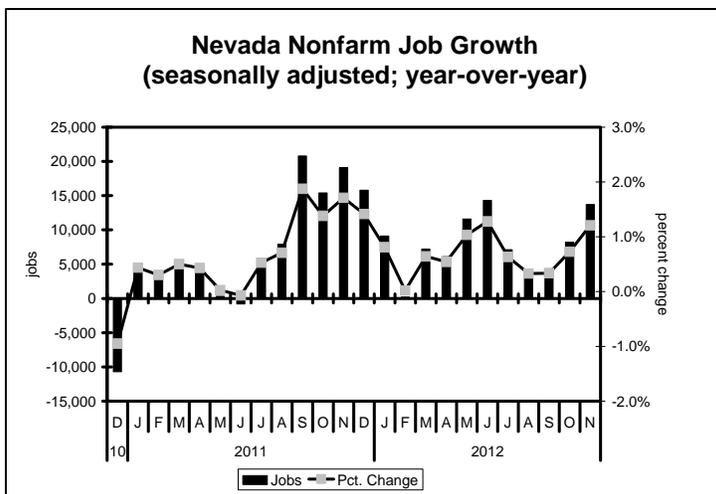

Trends in the private sector remain encouraging, as job readings reached the one-million mark for the first time since March 2009. Estimated gains so far this year total 11,400 compared to a year ago, based upon the monthly survey of business establishments. However, we already know that the results of a complete count of employment through just the first half of the year, based upon information provided by employers through the Unemployment Insurance Program,

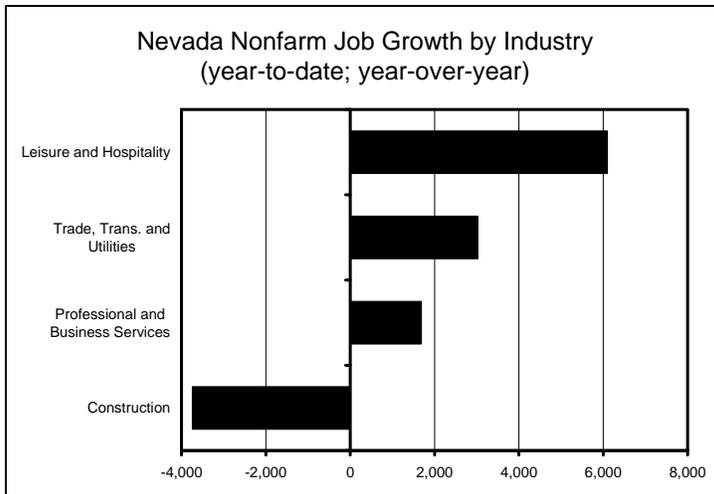

shows that private sector employment was up 16,800, a discrepancy which should drive our monthly estimates upward, post-benchmark.

It is interesting to periodically go beneath the surface of the labor market and examine underlying “churn.” This month, we examine the impacts of business closings and openings on employment levels. Although somewhat outdated, with information available through this year’s first quarter, the results are useful. Most importantly, after spiking during the recession, it appears that the number of job losses attributable to closing establishments has receded to pre-recessionary levels and is hovering at around 10,000 jobs per quarter, on average. On the flip side, job gains in opening establishments have yet to rebound off of recessionary lows. All told, in the four quarters ending in the January-March period, job gains from openings averaged 10,400 per quarter compared to a loss of 9,700 jobs from establishment closings.

This is consistent with other barometers which suggest that recessionary job losses have, for the most part, run their course, but we are yet to see a pronounced pickup in hiring activity.

On a side note, it is also interesting to assess the wages of new hires vs. those of all workers. Available information suggests that average

a year-to-date gain of 6,100 jobs through the first 11 months of the year. In November, an estimated 2,300 jobs were added to payrolls compared to October (seasonally adjusted). Even the construction industry showed some positive results in November, in adding a seasonally adjusted 1,500 jobs to payrolls. Still, for the year, job readings are down 3,700

monthly earnings for new hires are about two-thirds of the overall average for the total workforce in Nevada. That relationship has been quite stable over time.

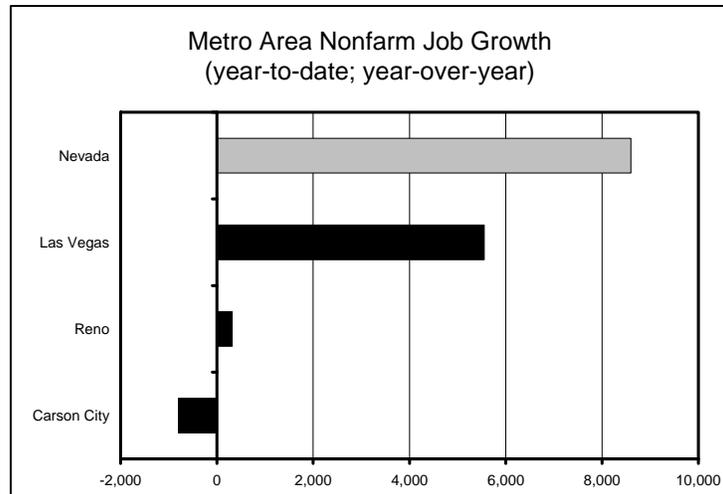

Seasonal holiday-related hiring appears to be off to a good start based upon trends in October and November. In the most recent month, retail trade employment rose by 6,700 compared to the prior month before seasonal adjustment. This is on top of a (revised) gain of 2,100 registered in October. These trends compare quite favorably to recent history. As an aside, December typically accounts for about ten percent of total taxable sales, measured on a calendar-year basis, in Nevada. That share declined to close to eight percent during the recession, but has rebounded in the past two years to a more normal level. Unfortunately, these gains are coming off of historical lows, and still leave room for considerable improvement.

November results in most industries are positive. Leisure/hospitality has been leading the way, over time, with

compared to the first 11 months of 2011. As we, and others, have discussed in the past, building activity is on the rise. For instance, after trending down for approximately five years, housing starts began to move in a positive direction earlier this year. In the 12 months ending in October, starts were up nearly 50 percent compared to the year ending in October 2011.

An analysis of the structure of the Nevada's job market, as it pertains to worksite size, yields some interesting results. From an employment perspective, worksites with at least 1,000 workers represent the largest share of private sector employment, with 178,000 jobs. Those with 20-49 workers have the second-highest share, with 157,000 employees. The smallest share of employment is at worksites with fewer than five employees, where there are nearly 60,000 workers. All told, though, worksites with fewer than 100 workers account for more than half of total private sector employment.

Looking at the landscape of Nevada's economy from a slightly different perspective, of the State's 71,000 worksites, more than 42,000 have fewer than five workers, the largest cohort. Worksites with fewer than 100 workers represent 98 percent of all worksites. There are just 75 worksites with more than 1,000 workers.

Within the State's three major population centers, only Carson City continues to see payrolls edge down. So far this year, about 800 jobs have been lost within the region. More than half (about 500) of those job losses are in the public sector. Elsewhere in Northern Nevada, Reno job readings have increased, relative to a year ago, in three consecutive months. November's 1.7 percent gain is the strongest since year-end 2006. In addition, the Washoe/Storey region added a seasonally adjusted 3,500 jobs to payrolls relative to October. This represents the largest monthly gain since January 2006. While Reno has picked up the pace of late, Las Vegas still accounts for the bulk of all new jobs. Specifically, Southern Nevada has added 5,600 jobs through this year's first 11 months.

In the October *Overview*, we examined structural forces at play in the U.S. economy by assessing long-term job growth relative to overall economic growth, as

measured by Gross Domestic Product. This month, we look at the same trends in Nevada, and we find very similar conclusions. Over the last 35 years, Nevada's economy, as measured by Gross State Product, has risen five-fold (400 percent). At the same time, job levels have increased "just" 265 percent. This suggests that workers have become more productive and incrementally fewer workers are needed to meet the needs of an expanding economy over time.

All things considered, November brought good news in the State's labor market. However, as we noted earlier, it's perhaps best to be cautious in assessing overall conditions. One need only look at Unemployment Insurance claim activity to see some signs of moderation. For instance, initial claims trended down for 31 consecutive months through June of this year. Since then, claims activity has ticked up in three of the last five months.
