DETR's RESEARCH AND ANALYSIS BUREAU
CHIEF ECONOMIST BILL ANDERSON

For Immediate Release
July 18, 2013

Nevada's Unemployment Rate Ticks Up to 9.6 Percent in June

The statewide unemployment rate nudged slightly to a seasonally adjusted 9.6 percent, but remains well below last June's 11.4 percent jobless rate. Nevertheless, Nevada job growth in June came in higher than anticipated, with the end result being a seasonally adjusted gain of 3,700 over the month, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation (DETR).

Governor Brian Sandoval was hopeful about the overall job growth in the state.

"I am pleased that we have now seen job gains, relative to a year ago, in each of the past 30 months," Governor Brian Sandoval said. "What's more, gains have been recorded in nearly all sectors of the economy so far this year. However, in order to help pave the way for additional improvement, more work remains to be done."

Job levels in Nevada have risen by 23,600 (2.1 percent) through the first half of 2013 with growth seen in all major sectors except professional and business services. The leisure and hospitality sector added the most jobs, with payrolls growing by 7,400 (2.3 percent).

Carson City and Las Vegas both registered the highest jobless rate amongst the States' three metropolitan centers at 10.1 percent, up by 0.6 and 0.8 percentage points, respectively, since May. The Reno/Sparks metro area recorded a rate of 9.8 percent, up from May's 9.3 percent reading. The over-the-year declines have been at least 1.2 percentage points in all three metro areas. Elko's rate was six percent, up from 5.2 percent last month, and down from 6.2 percent in June of last year.

Anderson noted that these types of increases are seasonal in nature and were to be expected.

"All in all, the June reports suggests that the jobs picture in Nevada remains on the mend," Anderson said. "Recent improvement has been steady and consistent. That's not to say that the overall situation is problem-free. With 132,400 unemployed Nevadans, considerable room remains for improvement."

DETR works in partnership with the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices.

NEVADA LABOR MARKET OVERVIEW June 2013

June's employment report shows an expansion of 3,700 (seasonally adjusted) in Nevada's job base. Based upon historical trends, we would have expected a loss of about 3,400 jobs (not seasonally adjusted) over the May-June period. This year, however, 300 jobs were actually added, resulting in the "adjusted" gain noted above.

At the same time, the State's unemployment rate remains stubbornly high. June's seasonally adjusted 9.6 percent reading is little changed from May's 9.5 percent, but does stand nearly two points below June 2012's 11.4 percent tally. The rate has held in a narrow range, 9.5 to 9.7 percent, throughout 2013.

The "discouraged worker" concept has been given much attention of late in Nevada. Discouraged workers refer to those individuals who want to work, but have given up their employment searches out of the belief that there are no suitable job options available. As a result, they are not included in official estimates of the labor force and are not counted amongst the unemployed. Over the past 12 months, the number of Nevadans estimated to make up the

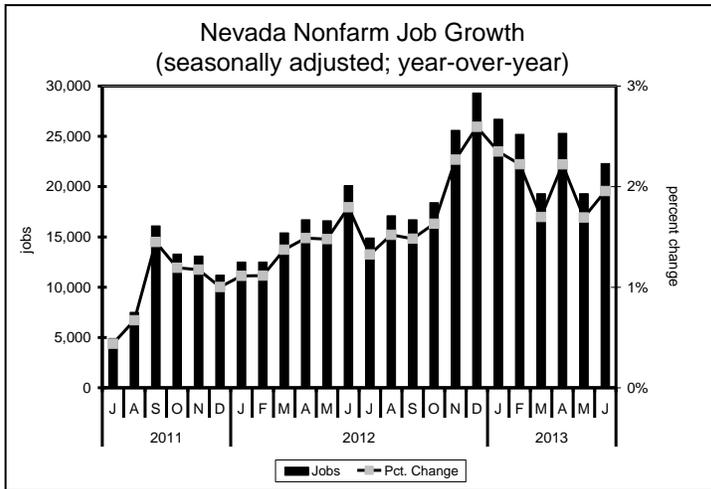

discouraged worker population has averaged 13,200. This compares to a total labor force well in excess of one million.

Due to seasonal fluctuations, unemployment rates in each of the State's three metropolitan areas typically increase in June¹. Carson City and Las Vegas both registered the highest jobless rate amongst the States' three metropolitan centers at 10.1 percent, up by 0.6 and 0.8 percentage points, respectively, since May. The Reno/Sparks metro area recorded a rate of 9.8 percent, up from May's 9.3 percent reading. The over-the-year declines have been at least 1.2 percentage points in all three metro areas. Elko's rate

Nevada and Sub-State Nonfarm Jobs: May - June Change

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	300	-3,400	3,700
Private Sector	5,500	1,800	3,700
Public Sector	-5,200	-5,200	0
Las Vegas	-1,600	-5,000	3,400
Reno	1,000	-100	1,100
Carson City	100	-300	400

¹ Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 9.9 percent in June, up from 9.2% in May and down from 11.5 percent in June 2012.

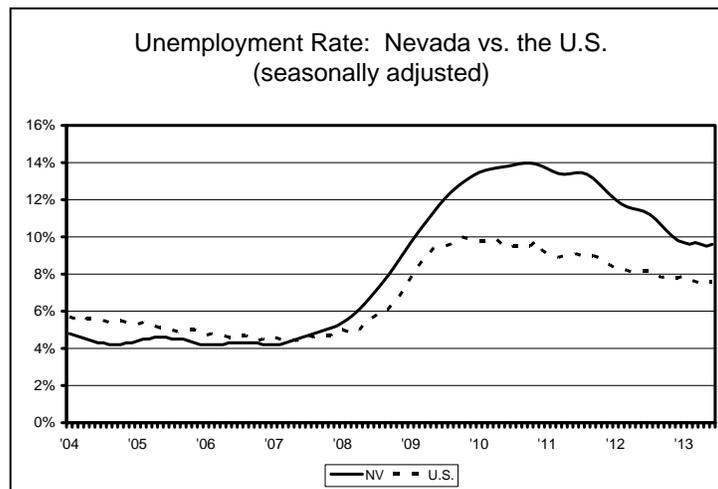

of Nevada’s exports, any price fluctuations in gold will surely impact total exports and mining employment. Mining employment still stands higher than last year’s levels, up by 1,100 over-the-year, but news from major mining companies is that employment cuts are looming.

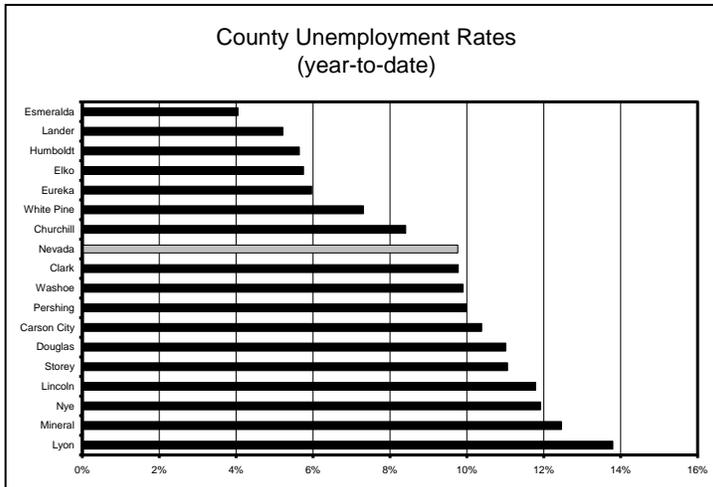

was six percent, up from 5.2 percent last month, and down from 6.2 percent in June of last year.

Back to the jobs picture, June gains, relative to May, occurred in mining (+200), construction (+2,500), trade/transportation/utilities (+1,000), education and health services (+100), and leisure and hospitality (+1,500). Losses occurred in financial activities (-300), professional and business services (-1,100), and other services (-200). Government and manufacturing were flat over the month.

Each month the Current Employment Statistics (CES) program surveys about 750 businesses and government agencies in Nevada, representing over 200,000 individual workers, in order to estimate timely changes in the State’s labor market. Employment estimates are adjusted annually by re-aligning job counts to tax reports submitted by employers subject to Nevada’s unemployment insurance laws. The re-alignment process is referred to as “benchmarking.” As the year progresses, the sample estimates usually deviate from actual

In the first quarter of 2013, gold prices dropped by 5.3 percent from \$1,723 to \$1,632 per ounce. Concurrently, mining exports (excluding oil and gas) fell by 48 percent from \$280 million to \$147 million, and primary metal exports fell by 21 percent from \$1.5 billion to \$1.2 billion. Gold price data for 2013:IIQ show a further retreat in gold prices of 13.4 percent. Because mining and primary metals account for nearly 60 percent

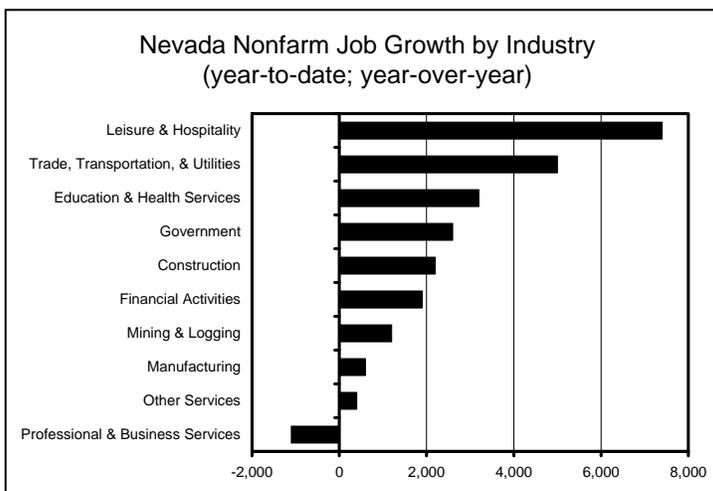

employment levels, so quarterly tracking is required to gauge the accuracy of the CES estimates.

With the recent release of the 2012:IVQ Quarterly Census of Employment and Wages (QCEW) data, the sample performance can be verified through 2012. The CES and QCEW series should trend nearly identically to each other, with slight deviations due to differences in coverage, as was the case for most of 2012. In November and December, however, the CES

sample pointed to noticeably stronger private-sector job growth than was actually occurring. An obvious deviation occurred in December, when the CES reported a year-over-year job growth of 28,600, while QCEW data show the increase was only 20,100, a difference of 8,500. The bottom line is that it appears that the CES sample overestimated employment in 2012:IVQ. We will continue to update these comparisons as additional information becomes available.

As a follow-up to a theme from last month's *Overview*, we take a more detailed look at teen employment trends in Nevada. The July-September period is typically the peak quarter for teen new hires, based upon information from the Census Bureau's Local Employment Dynamics Program in partnership with each of the states. In fact, this was true in every year but two over the 1999-2012 period. On average, IIIQ teen new hires exceeded the average for the other three quarters of the year by approximately 5,000. Prior to the recession, new hires of 14-18 year olds peaked at 37,800 in 2005:IIIQ. Hiring activity tumbled during the recession and has held relatively steady in the 13,000-range in each of the past four years. Against the backdrop of modest improvement in the State's overall

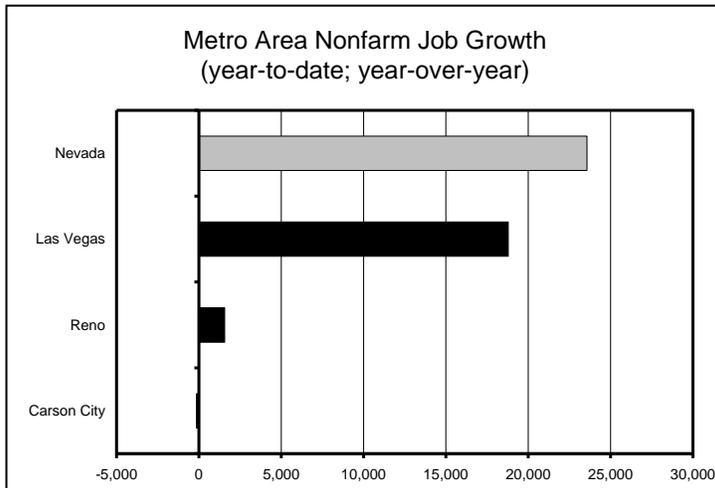

labor market, it is hoped that the situation for teens will follow suit as the summer months unfold.

With the year half over, it is a good time to examine the recovery's progress at the statewide level and for the major metro areas. Job levels in Nevada have risen by 23,600 (2.1 percent) so far in 2013 with growth seen in all major sectors except professional and business services. The private sector added 20,900 (2.1 percent) and the government sector added 2,600 (1.7 percent) in the first half of the year compared to the first half of 2012. The leisure and hospitality sector added the most jobs, with payrolls growing by 7,400 (2.3 percent) and trade, transportation, and utilities posted an increase of 5,000 (2.3 percent). The education and health services sector was also a top performer, adding 3,200 (three percent) to payrolls. Within the professional and business services sector, which has declined by 1,100 (-0.8 percent), the professional, scientific and technical services industry drove the decline with a loss of 1,000 (-2.1 percent). All in all, the theme of a mild, but steady recovery persists.

June ends a 13-month year-over-year growth streak for the Reno/Sparks area as employment levels were flat. Jobs have increased by 2,200 from the cyclical low point realized in 2011 at 189,100. This equates to an average gain of slightly more than 100 jobs per month. Construction jobs are returning to the area and stand 100 (1.2 percent) higher than

last year on a year-to-date basis. With home prices accelerating at breakneck speeds (the Reno/Sparks Association of Realtors reports an increase of 30.6 percent compared to June of 2012), it is no wonder construction is rebounding. Professional and business services, however, seems to be facing downward pressure with a loss of 900 (-3.4 percent) jobs in the first half of 2013 compared to the same period in 2012. The accommodation and food services industry found stabilization in 2009 and hasn't much budged from those levels.

The Southern Nevada economic recovery continues at a growth rate of 2.3 percent (+18,800 jobs) over the first half of 2013 compared to the same period in 2012 with advances in all major sectors. Construction employment grew by 1,700 year-to-date, or 4.8 percent. For reference, construction employment in Las Vegas peaked at just fewer than 110,000 and now sits just under 40,000. Like the Reno/Sparks area, the Las Vegas area is also experiencing sharp increases in real estate – with existing home prices up by 32.8 percent from one year ago. As always, it is good to put these numbers into perspective. The Greater Las Vegas Association of Realtors states that the peak median price for an existing single-family home was set in June 2006 at \$315,000. Seven years down the road the median price in June was \$175,000. Also coming in strong on the jobs front is professional and business services, which grew by 3,300, or 3.1 percent. All in all, the goods producing industries are up by

1,900, or 3.5 percent, and the service producing industries increased by 16,800, or 2.2 percent. Even government employment is making headway in its recovery with the addition of 2,700 new jobs (2.8 percent). Las Vegas once again is leading the State in job growth.

If the rapid ascension in home values continues, it may dampen homeownership opportunities. In the west, homeownership rates tend to be lower because the region is still recovering from the housing bust. Capitalizing on the influx of families moving into the state and from families moving from ownership to renters brought on by the housing bust, investors have been quick to purchase single-family homes. The share of Nevadans who own their homes was 56.9 percent in the first quarter, down from 58.2 percent a year earlier. Potential buyers face headwinds with tight credit, low inventory, and competition from investors. Utah and Idaho seem to have escaped the brunt of the housing bust as evidenced by homeownership rates of 70.8 and 71.3 percent, respectively.

Nevada's sector-driven approach to economic development necessitates a structural assessment of the State's job base. One of the earliest steps taken involved an assessment of economic concentration (across sectors) in the State. Location quotient-driven analyses provide an oft-used tool to gauge the relative presence of various sectors in Nevada by

looking at the share of total employment accounted for by individual sectors relative to the nation as a whole. For instance, the location quotients for the tourism/gaming/entertainment and mining sectors are, roughly, 2.5. Nevada's share of employment in these two sectors is more than double the national average for those same industry groups. On the other hand, the health/medical services sector has a location quotient of just 0.65, suggesting that the share of Nevada employment in this sector is just two-thirds of the national average. For other notable sectors, clean energy and logistics/operations, the location quotient is about 0.8.

In June, the national labor force grew to 155.8 million participants either working (144 million) or looking for work (11.8 million). An analysis of "flows" into and out of the labor force helps gauge the health of the US job market. For instance, historical evidence suggests that individuals will be drawn into the labor force as job prospects improve. This has been the case nationally of late. In

fact, we are seeing more people enter the workforce and find employment. At the same time, we are also seeing a decline in the number of individuals entering the workforce and counted amongst the unemployed.

Specifically, in June, 2.7 million people previously classified as nonparticipants in the labor force decided to start looking for work and were counted as unemployed, while 3.9 million individuals entered the labor force and were employed. The transition between non-participation and the labor force is important to understanding the underlying dynamics of the aggregate unemployment rate.

The U.S. Bureau of Economic Analysis recently published 2013:IQ personal income estimates. In the first quarter of the year, Nevada personal income was up 2.3 percent from the same period in 2012. At the height of the recession, in 2009, income declined by nearly nine percent, and in the years since the recession it has rebounded. While the news is encouraging, Nevada sits 0.5 percentage points below the national personal income growth rate of 2.8 percent, indicating that room for further improvement remains, but the gap does appear to be narrowing.
