**DETR's RESEARCH AND ANALYSIS BUREAU
CHIEF ECONOMIST BILL ANDERSON**

For Immediate Release
December 20, 2013

Nevada's Unemployment Rate Drops to 9 Percent

Carson City, NV —Nevada's unemployment rate fell to 9 percent in November, down from 9.3 percent in October, making it the most significant improvement in the unemployment rate since last November.

"I am encouraged by recent labor market trends," Governor Brian Sandoval said. "The unemployment rate is the lowest it has been since November 2008 and employment has increased for 35 consecutive months (measured on a year-over-year basis), with nearly every sector of Nevada's economy making a contribution. As we end 2013, Nevada expects to have added approximately 50,000 jobs since 2010. However, with 123,000 Nevadans still unemployed, we must continue our efforts to strengthen and diversify the State's economy."

For the second month the state has added jobs, with an adjusted addition of 9,500 in November relative to October, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation. Each of the metropolitan areas saw year over year and monthly declines in their rates of unemployment. Las Vegas' rate fell to 8.6 percent; Reno's rate measured at 8.2 percent and Carson City's rate stands at 9.1 percent.

"While the continued decline in the unemployment rate is good news, Nevada's recovery is still slow compared to other states," Anderson said. "Because the Silver State was the hardest hit, its recovery will take longer. Of the jobs lost during 2007 to 2011, about one-quarter of them have returned."

DETR works in partnership with the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices.

NEVADA LABOR MARKET OVERVIEW November 2013

For the second month in a row, employment in Nevada advanced with above average growth. The seasonally adjusted addition of 9,500 jobs in November was above the 2013 average gain of 1,600, as was October's revised estimate of 6,600. Nevada's unemployment rate fell to nine percent in November from 9.3 percent in October. The decline was also remarkable in that a drop of at least 0.3 has not been experienced since November of last year. Still there are 123,000 unemployed Nevadans.

While not directly comparable to the State information reported above, non-seasonally adjusted unemployment rates in the State's three largest population centers fell over the month. More importantly, each area recorded year-over-year declines ranging from 0.6 percentage point in Carson City to 1.2 points in Las Vegas and Reno/Sparks. Carson City remains home to the highest rate of the three metro areas at 9.1 percent. Las Vegas has a rate of 8.6 percent and in the Reno/Sparks area the rate measured 8.2 percent.

Given historical trends, we would expect a slight decline of about 700 jobs from October to November. This November, job levels increased by 8,800. The end result is the seasonally adjusted gain of 9,500 reported above.

The U.S. economy continues to recover as well. Employment has increased for 38 consecutive months and has averaged 189,000 new jobs per month in 2013. The U.S. economy is about 880,000 jobs shy of its former peak, which was set in 2007. At the current rate of job production, employment levels should hit the recovery mark (the previous peak) sometime in 2014 barring any unforeseen

impediments. The nation's unemployment rate also fell by 0.3 percentage point from October to November, to seven percent.

Nevada and Sub-State Nonfarm Jobs: Sept. - Oct. Change			
	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	8,800	-700	9,500
Private Sector	8,000	-600	8,600
Public Sector	800	-100	900
Las Vegas	700	-5,200	5,900
Reno	-300	-1,100	800
Carson City	-100	300	-400

Employment counts in the retail trade sector moved above pre-recession levels for the first time. Pre-recession levels peaked in 2007 at 139,800, fell to a low in 2010 at 127,200, and for the first time, reached above to 143,400 jobs in November. If these levels hold, retail trade is in an expansionary phase sooner than anticipated. Shopping has become a tourist magnet in the Silver State, and thus is a comparative advantage.

Many states, especially in the mid-west, have already put the recession in their rear view mirror. These states have "recovered," meaning current employment levels are above their former peak. Nevada's recovery is less developed because it was one of the last states to begin growing again. Of the jobs lost during 2007 to 2011, about one quarter of them have returned. The State has recovered relatively more jobs than Rhode Island, Alabama, and New Mexico.

Although some areas of the labor market are bouncing back, real wages, which account for inflation, are not. Comparing the first six months of the year relative to the same period in the previous year, total wages have grown by 0.8 percent. However, inflation has grown at a rate of 1.5 percent, indicating that Nevada's average weekly wages are not keeping up with inflation.

The Bureau of Labor Statistics reports six alternative measures of labor underutilization, deemed the U1-U6 rates, with the official unemployment rate most similar to the U-3 rate. The official ranks of the unemployed include all people without jobs who are ready to work and have actively sought employment in the prior four weeks. The other measures are provided to analyze the rate by redefining the official concept. Of the six other

measures of underemployment, most attention is paid to the discouraged workers (U-4) and involuntary part-timers (U-6). Including all the people discouraged over jobs prospects (not included in the official definition because of failing to meet the job search criteria), the unemployment rate would increase by about 0.8 percentage point. The broadest measure of labor underutilization rates, U-6, includes involuntary part-timers, defined as those working part-time, but who would prefer full-time work. The U-6 rate, at 18.1 percent, peaked in the four-quarters ending in 2011:1Q at 23.7 percent.

may also be struggling to lock in gains. In November it contracted by 1,000 positions, and year-over-year figures are flat.

This month we look at employment in the logistics and operations industries, which are housed in the trade, transportation, and utilities sector. Nevada stands to emerge as a hub, so to speak, due to the State's location in the western U.S. Many companies have moved their operations to Nevada partly because most major western cities are within one or two days driving distance. Approximately 63,000 people are currently employed in these industries in Nevada, and logistics and operations employment as a whole has grown by nine percent since 2002.

In the Reno-Sparks area a cold front led to a record consumption of natural gas in a 24 hour period in early December. A cold winter in most of the U.S. and Nevada has halted gains in the construction industry; the sector lost 1,200 seasonally adjusted jobs over the month. The financial activities sector

The top employing sub-sector is general warehousing and storage with 10,000 employees, which is 16 percent of the total employment for the logistics and operations industry. General warehousing and storage has experienced a growth of 133

percent since 2002, more than doubling in ten years. The national growth rate for this sub-sector was at 36 percent for the same time period. Another top growth sub-sector is local specialized freight trucking. This subsector has grown by 107 percent since 2002, compared to a 13 percent national growth rate.

The health care and social assistance sector is a stalwart creator of new jobs. It sits 3,600 jobs above last year's reading as of November. Near-term demand is likely to increase due to the implementation of the Affordable Care Act. The increased demand for healthcare services should lead to more jobs in the sector.

Some are concerned that employers will cut back positions in response to the Affordable Care Act. Employers near the 50 full-time equivalent threshold may find it less expensive to stay below that level than to provide health care. Anecdotal evidence concerning the extent to which this is actually happening can be obtained by examining the employment records that nearly all Nevada employers must submit in compliance with unemployment insurance laws.

Over 60,000 unique business establishment records were examined with the vast majority (58,700) of businesses staying either above or below the 50 employee threshold between 2012:IIQ and 2013:IIQ. About 230 establishments fell below 50 employees when they were above a year earlier, and about 320 establishments rose above the

50 employee mark when they were below a year earlier. (It should be noted that the ACA threshold refers to full-time equivalent employees. Employers in Nevada do not report hours worked in submitting unemployment insurance records, hence, an FTE count cannot be calculated.)

The Research and Analysis Bureau continues to investigate the relatively high unemployment rates for Blacks. One hypothesis is that Blacks were more concentrated in industries that lost a disproportionate amount of jobs over the recession. The five industries that lost the most jobs from 2006 to 2010 were construction (-83,600), accommodation and food services (-23,600), administrative/support/waste management (-19,000), manufacturing (-12,400), and retail (-9,600). Prior to the recession, Blacks were more concentrated in administrative/support/waste management/remediation services, but less concentrated in construction. The differences between the share of Black employment in these hardest hit industries compared with the share of jobs economy wide do little to explain the differences seen in the unemployment rates.

The end of the year means the beginning of the benchmarking process where the sample based Current Employment Statistics (CES) reported each month are realigned with the most accurate levels of employment available. Approximately 98 percent of all employment in Nevada is recorded

in the unemployment insurance records and reported in the Quarterly Census of Employment and Wages (QCEW). The CES program is the more visible of the two because it provides a snapshot of current movements in Nevada's labor market versus a six month delay in the QCEW series.

workers, where job readings fell 800, relative to 2012:IIQ.

Recently the Research and Analysis Bureau released 2013:IIQ QCEW results. Comparing them to CES estimates, we can see how some sectors will likely be changed in the benchmark. For example, the professional and business services sector has struggled according to CES estimates, but QCEW shows the sector has added the most jobs in the first half of 2013 compared to 2012. The construction industry had the highest growth rate in the QCEW series, increasing by ten percent. In the CES estimates, it was up by 4.5 percent in the first half of the year. We can now conclude that every major sector in Nevada's economy is adding to payrolls except government. Although, its loss was a mere 60 jobs.

In the second quarter, the total number of jobs in the private sector was up by 25,400 according to QCEW estimates. Small businesses with zero to 99 employees created more than three quarters of the total private sector jobs. Jobs among employers with 1000+ employees accounted for about ten percent of the gains, or 2,400 jobs from a year ago. The exception to employment growth by size class, are the establishments with 500-999
