DETR'S RESEARCH AND ANALYSIS BUREAU
CHIEF ECONOMIST BILL ANDERSON

PRESS RELEASE

For Immediate Release
May 16, 2014

Nevada's Unemployment Rate Falls to 8 Percent in April

In April, Nevada's seasonally adjusted unemployment rate fell to 8 percent, down from 8.5 percent in March. This is the largest drop the state has seen in its unemployment rate since 1983. The number of unemployed fell from 117,300 in March to 110,000 in April.

"Our state continues to make positive economic progress, and, most importantly, more Nevadans are working again," said Governor Brian Sandoval. "We are experiencing broad-based growth across nearly all industries, and we have added jobs for nine straight months. While the news from month to month continues to be positive, there are still too many Nevadans out of work. My focus will remain on growing jobs in our state until every Nevadan that wants a job has one."

Employers added 3,000 jobs to payrolls, the ninth consecutive monthly gain and the 39th consecutive gain on a year over year basis, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation (DETR).

"Along with the decline in the unemployment rate, other barometers, such as initial claims for unemployment insurance and house prices showcase the improving economy," Anderson said. "Nearly all major industries and all of Nevada's metropolitan statistical areas (MSAs) are growing in this broad based recovery with nearly every new report bringing noticeable advances."

The non-seasonally adjusted unemployment rates fell in each of the State's metro areas. Las Vegas had a reading of 7.4 percent, down by 2.5 over-the-year, and the rate in the Reno/Sparks area fell by 2.9 to 7 percent. Carson City's fell by 2.5 percentage points to 7.8 percent. In the Elko area, the rate fell to 5 percent from 6 percent last year.

Year to date, there are 44,000 more jobs than there were in the same period in 2013. The private sector is averaging a gain of 42,700, or a 4.3 percent increase, Anderson said. About 55 percent of the jobs that were lost during the downturn have been recovered in total.

"Comprehensively, all the MSAs are making progress with jobs," Anderson said. "Las Vegas is obviously the leader in numerical change, with employment up by 27,300 so far in 2014. However, Carson City has the distinction of the highest monthly growth rate out of the three MSAs at 1.1 percent (300 jobs) from March-April. Reno/Sparks has the highest year-to-date growth rate at 4.7 percent (8,900 jobs). In the Reno/Sparks area, the professional and business services sector has added 2,800 jobs year to date for a very high growth rate of 10.9 percent."

DETR works in partnership with the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices.

NEVADA LABOR MARKET OVERVIEW April 2014

Nevada experienced another monthly increase in employment (3,000) and a decrease in the unemployment rate, which now sits at eight percent, down from 8.5 percent in March. A decline that large last occurred in 1983. Other barometers, such as initial claims for unemployment insurance and house prices, discussed in more detail later, also showcase the improving economy. Nearly all major industries and all of Nevada's metropolitan statistical areas (MSAs) are growing in this broad based recovery with nearly every new report bringing noticeable advances.

Finance Administration, Nevada house prices rose by 24 percent in 2013, the largest increase since 2004. More recent estimates of annualized gains from the Greater Las Vegas Association of Realtors (GLVAR) and the Reno/Sparks Association of Realtors (RSAR) show price gains are slowing in both the Las Vegas and Reno/Sparks areas. Existing single-family homes sold in the Las Vegas area have appreciated by 15 percent in April from a year ago according to GLVAR. In the Reno/Sparks area, prices for existing single-family homes are up by 12 percent from

April 2013. A leveling off in appreciation rates to a more normal and sustainable level has been expected.

Residential property prices in Nevada have been recovering since 2012.

Real estate prices are increasing across the country; however, no other state's average appreciation rate was above 20 percent except Nevada's. U.S. house prices rose 7.7 percent in 2013 compared to

2012. Information from December 2013 through February 2014 (the latest data available at the national level) show monthly price gains

The 2013 average home price appreciation rate was impressive. According to the Federal Housing

despite the unusually cold and snowy winter weather in some parts of the country.

The unemployment rate is calculated with inputs from the monthly employer survey, household survey, and initial claims for unemployment insurance. All three inputs support downward pressure on the rate. On a year-to-date basis, claims are down by 11.8 percent over the year. The 2014 year-to-date drop is the best since 2011 when the State was coming off the recessionary highs.

Dynamics between the unemployed and total labor force can make the unemployment rate volatile. For example, in April the number of unemployed fell from 117,300 in March to 110,000 in April. Taking the year-to-date average irons out the volatility to reveal the underlying trend. From January to April, the number of unemployed Nevadans averaged 115,600, and the unemployment rate averaged 8.3 percent, 2.2 percentage points below the rate a year ago. Since December, the rate has dropped a full percentage point.

The non-seasonally adjusted unemployment rates fell in each of the State's metro areas.¹ Las Vegas had a reading of 7.4 percent, down by 2.5 over-the-year, and the rate in the Reno/Sparks area fell by 2.9 to seven percent. Carson City's fell by 2.5 percentage points to 7.8 percent. In the Elko area, the rate fell to five percent from six percent last year.

In April, employers added 3,000 jobs to payrolls, the ninth consecutive monthly gain and the 39th consecutive gain on a year over year basis. On a year-to-date basis, there are 44,000 more jobs in 2014 than there were in the same period in 2013. The private sector is averaging a gain of 42,700, or a 4.3 percent increase. About 55 percent of the jobs that were lost during the downturn have been recovered in total.

Of Nevada's super-sectors, nine out of ten are experiencing growth so far this year. Mining employment has declined by an estimated 300 positions. Professional and business services hit the recovery mark this month. Any growth beyond current levels will bring jobs in the sector above the prerecession peak. Jobs in the professional and business services

¹ Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 7.3 percent in April, down from 8.7 percent in March and down from 9.8 percent in April 2013.

sector are up by 9,300 year-to-date through April. Leisure and hospitality has added 11,800 and manufacturing grew by 1,300 over the same time frame. Currently, manufacturing has recovered about 29 percent of the jobs lost during the recession.

selected study area. In Carson City, more people commute into the area for work than people who both live and work in the State capital. Approximately 57 percent of the people employed in Carson live outside the area, compared to 43 percent living and working in Carson City. In Clark County, 94 percent of the employed both live and work in the area, while six percent are employed in the area and live outside. People living and working in Washoe County account for 83 percent of all jobs holders, and the remaining 17 percent work in the area but live outside.

Comprehensively, all the MSAs are making progress with jobs. Las Vegas is obviously the leader in numerical change, with employment up by 27,300 so far in 2014. However, Carson City has the distinction of the highest monthly growth rate out of the three MSAs at 1.1 percent (300 jobs) from March-April. Reno/Sparks has the highest year-to-date growth rate at 4.7 percent (8,900 jobs). In the Reno/Sparks area, the professional and business services sector has added 2,800 jobs year-to-date for a very high growth rate of 10.9 percent.

Worker inflows and outflows are likely higher in the northern metro areas because many consider Carson City, Reno/Sparks and the surrounding areas as one labor pool. So naturally, there is a lot of movement between the areas. In Clark County, limited employment opportunities exists within a reasonably driving distance outside the County.

The U.S. Census Bureau has information on worker flows in to, out of, and within a

Retail salespersons and waiters/waitresses are the occupations with the largest employment in Nevada. These two occupations combined make up approximately 5.6 percent of total employment, with employment levels of 46,500 and 38,500, respectively in May 2013, the latest occupational data available. The ten largest occupations accounted for about 21 percent of total employment. In addition to retail salespersons and waiters/waitresses, the largest occupations include combined food preparation and service workers, including fast food; janitors and cleaners, except maids and housekeeping cleaners; cashiers; and general office clerks.

wages for tipped occupations, such as dealers, are likely to be substantially higher than what estimates show.

The change in the number of jobs over time is the net result of increases and decreases in employment that occur in all businesses in the economy. During 2013:IIIQ gross job gains at expanding or opening private sector establishments totaled 61,300, a decrease of 4,700 from the previous quarter. This is an increase of 3,100 relative to the same period in 2012. Gross job losses at contracting or closing private sector establishments totaled 58,000 in the third quarter of 2013, an increase of 2,000 from the

previous quarter. This is a year over year increase of 700 job losses. The difference between the number of gross job gains and the number of gross job losses yields a “net” employment gain of 3,400 jobs in the private sector during 2013:IIIQ, an increase of 1,000 net jobs relative to last year. This represents the twelfth consecutive quarter of net job growth, based upon BLS’s Business

Employment Dynamics.

These top six occupations pay an average wage greater than the national average for the same occupation. Another example on the high end, Nevada maids and housekeeping cleaners are paid 34 percent more than the national average; whereas, gaming dealers are paid at 82 percent of the national wage. An important note here is that

The U.S. economy added 288,000 jobs in April, and the unemployment rate fell to 6.3 percent from 6.7 percent a month earlier. Job growth occurred in every super-sector barring information, which fell by 3,000 jobs. In April, the number of unemployed people totaled

9,753,000. Federal government employment continues to descend, falling to levels last seen in the 1960s. Local governments, on the other hand, are making a comeback in employment, rising by 45,000 since the start of 2014. Nationally, the private sector accounts for 84 percent of jobs. Total job levels are 113,000 short of the recovery mark, meaning next month could complete the U.S.'s job recovery.

Nevada and Sub-State Nonfarm Jobs: Mar. - Apr. Change			
	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	6,500	3,500	3,000
Private Sector	6,300	3,000	3,300
Public Sector	200	500	-300
Las Vegas	2,100	4,300	-2,200
Reno	2,100	900	1,200
Carson City	400	100	300

On the last day of February, the Bureau of Labor Statistics estimated that there were 4.2 million job openings across the nation, up by 158,000 over the year. Concurrent improvement was experienced in the number of unemployed persons per job opening. The ratio between the unemployment level and job openings trended downward to 2.5 in February 2014 from its peak of 6.8 in July 2009. Employers have the most open positions in six years with most of them in the professional/business service sector and the trade/transportation/utilities sector, each containing approximately 20 percent of the job openings.

Nevada's clean energy sector includes energy extraction, generation, distribution, construction

of infrastructure, environmental agencies and some manufacturing companies. Since 2010, the clean energy sector has lost about 1,600 jobs with nearly all of the decline in the construction related industries. The contraction had nearly everything to do with the housing bust rather than a move away from clean energy. To substantiate this point, Nevada welcomed its first utility scale wind facility near Ely in

August 2012. Known as the Spring Valley wind farm, this facility has the capacity to generate up to 150 MW of wind energy. The Governor's Office of Economic Development points to the State's solar, wind and geothermal potential, available land, and a strong commitment to a renewable energy portfolio

for the eminent job growth of the clean energy sector.

Nevada

Employment & Unemployment

Estimates for April 2014

Unemployment Rates:

Nevada Statewide (Seasonally Adjusted)	8.0%
Las Vegas-Paradise MSA	7.4%
Reno-Sparks MSA	7.0%
Carson City MSA	7.8%
Elko Micropolitan Area	5.0%
United States (Seasonally Adjusted)	6.3%
California (Mar) (Seasonally Adjusted)	8.1%
