## **Nevada's Unemployment Rate Falls to 6.8 Percent in December**

Carson City, NV —Nevada's unemployment rate for December fell to a seasonally adjusted 6.8 percent, down from 6.9 percent in November and 9 percent in December 2013. This is the lowest the rate has been since June 2008 when it was also at 6.8 percent.

“The Silver State continues to experience positive gains in our job market, pointing to overall improvements in our economy,” said Governor Brian Sandoval. “I am pleased to see Nevadans are going back to work and employers are adding jobs, helping to strengthen our communities. There is still work to do and I remain committed to continuing our efforts to build a strong and sustainable economy for future generations.”

The unadjusted unemployment rate for each of the state's metropolitan statistical areas (MSA) is down this month on a year-over-year basis. The Las Vegas-Paradise and Reno-Sparks MSAs are both down two percentage points from December 2013, to 6.9 percent and 6.2 percent, respectively. The Carson City MSA is down 2.2 percentage points over the year, for an unemployment rate of 7 percent, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation (DETR).

“All 17 of the state's counties now have unemployment rates below 10 percent,” Anderson said. “We have positive indications that Nevada's labor market will continue to improve, as employers steadily add jobs to the economy. For the entire year, private sector job growth came to 38,200 relative to all of 2013. This is on top of gains recorded in previous years. After bottoming out in 2010, private sector job growth totaled 11,500 in 2011. This was followed by gains of 20,000 in 2012 and 29,200 in 2013. Added up, this comes to 99,000 new jobs since 2010. When we consider the latest available data, through the second quarter of 2014, Nevada's private sector is growing at 3.7 percent relative to the same period in 2013, making us the state with the third-fastest growing private sector in the nation.”

## NEVADA LABOR MARKET OVERVIEW December 2014

Our monthly analyses typically focus on labor market trends in assessing the underlying health of Nevada's economy. A periodic assessment of other indicators also provides insight into the Silver State's performance. Hence, we will often examine such measures as taxable sales, housing, and gaming win, to name just a few. This month, we look at population growth. The U.S. Census Bureau has recently released 2014 population estimates. Nevada's population totaled 2.84 million, up from 2.79 million in 2013. This translates into a gain of 47,600 year-over-year. Most notably, this 1.71 percent increase is the second-strongest gain in the nation. There are surely a number of potential explanations for this increase, but at least some of Nevada's recent population growth is likely a reflection of an improving economy. Prior to the recession, population growth topped out in excess of four percent.

Personal income trends also shed light on the underlying strength in the economy. Income totaled \$114.3 billion (annualized) in 2014:IIIQ. This equates to a gain of four percent relative to a year ago. In

fact, income gains have been realized in 16 of the past 17 quarters. Through the first three quarters of 2014, personal income growth averaged 3.7 percent, essentially identical to the nation's 3.8 percent advance. Gains in excess of ten percent were recorded in the period just prior to the most recent recession.

**Nevada and Sub-State Nonfarm Jobs: Nov. - Dec. Change**

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	-900	-3,400	2,500
Private Sector	-1,900	-4,200	2,300
Public Sector	1,000	800	200
Las Vegas	-1,100	-1,800	700
Reno	-900	0	-900
Carson City	-100	0	-100

Preliminary<sup>1</sup> indications suggest that 2014 proved to be a solid year on the employment front for Nevada. December jobs totaled 1.22 million, seasonally adjusted; a gain of 2,500 relative to November. Historical trends suggest that the month of

<sup>1</sup> In early-2015, historical monthly job estimates from the Current Employment Statistics Program (and labor force information from the Local Area Unemployment Statistics Program) will go through the annual "benchmarking" process in which original estimates are revised, based upon more complete information. These results will be available beginning in late-February.

December typically brings with it a decline of 3,400 jobs (not seasonally adjusted), relative to the prior month. However, in the final month of 2014, just 900 jobs were lost, resulting in the seasonally adjusted gain reported above.

covered under the Unemployment Insurance System, as opposed to the monthly estimates reported above. Because generating this information is a time-consuming process, it is only available with a 4-5 month lag. Examining this information over time, and for all 50 states (plus the District of Columbia), highlights Nevada's relative performance during the pre-recessionary boom, through the downturn, and into the recovery.

information over time, and for all 50 states (plus the District of Columbia), highlights Nevada's relative performance during the pre-recessionary boom, through the downturn, and into the recovery.

In the years preceding the economic downturn, Nevada led the country in private sector employment growth, with the highest employment growth rate in the country in 2004 and the second-

For the entire year, private sector job growth came to 38,200 relative to all of 2013. This is on top of gains recorded in previous years. After bottoming out in 2010, private sector job growth totaled 11,500 in 2011. This was followed by gains of 20,000 in 2012 and 29,200 in 2013. Added up, this comes to 99,000 new jobs since 2010.

highest in 2005 (6.4 percent each year). Conversely, during the recession, Nevada was the most affected state in terms of private sector employment growth. In fact, Nevada's employment growth was the lowest in the nation in 2009 (-10.1 percent) and 2010 (-2.8 percent). Looking at the first three years of the recovery, Nevada's private sector was steadily making up for lost ground. In 2011 the private sector outgrew 14 other states with a growth rate of 1.2 percent. Then in 2012, growth in the private sector accelerated to 1.9 percent, which put Nevada ahead of 24 states. In 2013 the private sector grew at a rate of 2.7 percent, a larger growth rate than 38 other states.

In order to look at recent labor market developments from another perspective, we can utilize the information obtained through the Quarterly Census of Employment and Wages (QCEW) Program, which provides a nearly complete job count based upon wage records submitted by employers whose employees are

2010, 11 counties had double-digit unemployment rates in December.

The unadjusted unemployment rate<sup>2</sup> for each of the State's metropolitan statistical areas (MSA) is down this month on a year-over-year basis. The Las Vegas-Paradise and Reno-Sparks MSAs are both down two percentage points from December 2013, to 6.9 percent and 6.2

percent, respectively. The Carson City MSA is down 2.2 percentage points over the year, for an unemployment rate of seven percent.

When we consider the latest available data, through the second quarter of 2014, Nevada's private sector is growing at 3.7 percent relative to the same period in 2013, making us the state with the third-fastest growing private sector in the nation.

Nevada's job growth is putting downward pressure on the unemployment rate.

December's jobless rate, at 6.8 percent, is the lowest since an identical reading in June 2008. It is down from 6.9 percent in November and nine percent in December 2013.

Each of Nevada's 17 counties is home to a jobless rate in the single-digits in December. A year ago, in December 2013, four counties had double-digit unemployment rates. In 2012, seven counties in the Silver State had jobless rates in excess of ten percent. There were ten counties exceeding that threshold in 2011. In fact, at the height of the recession, in

Individuals can be counted amongst the unemployed for a number of reasons. An examination of trends

<sup>2</sup> Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 6.7 percent in December, down from 6.9 percent in November and down from 8.7 percent in December 2013.

in the number of Nevadans unemployed as a result of an involuntary job loss highlights the impacts of the labor market recovery in the State. Prior to the recession, job “losers” totaled less than 20,000 in the Silver State. As the downturn unfolded, the number of Nevada workers who became unemployed as the direct result of a job loss spiked to 115,700 by mid-2010. Since then, there has been a noticeable decline. Over the past 12 months, an average of 46,300 Nevadans have been unemployed due to a job loss.

The unfolding labor market recovery has also cut the number of long-term unemployed. Prior to the recession, those unemployed for at least 27 weeks totaled less than 10,000. At the height of the recession, in late-2011, long-term unemployment peaked at 93,000. In 2014, it averaged 40,400.

At the sub-State level, pronounced job gains were evident in both Las Vegas and Reno for all of 2014, while Carson City employment essentially held steady. Specifically, preliminary information shows that the Las Vegas metro area added

25,600 jobs over the entire year, as employment averaged nearly 875,000 per month. The Reno metro area was home to 203,000 jobs in calendar year 2014, up 6,400 relative to the prior year. Carson City’s employment base was down a very slight 100 jobs for the year, at 27,500. In percentage terms, Reno’s job gain, at 3.2 percent, was slightly more pronounced than Las Vegas’ three percent advance.

Recent job gains have been widespread across nearly every sector of the economy. Of the ten so-called “super sectors,” all but one, mining/logging, added jobs in 2014. Professional/business services led the way, with preliminary numbers pointing to job growth in excess of 10,000. Leisure/hospitality, the State’s largest sector, employment-wise, added close to 8,000 new positions. Construction continued its rebound in generating 5,500 new jobs.

Mining employment in the Silver State fell by 400 in 2014, based upon preliminary estimates. While total employment in the sector is “just” 15,000, the health of these industries has a considerable impact on the economies of several of Nevada’s rural counties, especially in the northeast.

Mining job growth is projected to average about 200 per year over the next few years. The mining super sector accounts for about 1.2 percent of total non-farm jobs in the Silver State. Looked at in relative

terms, mining’s “location quotient” (LQ) is 2.00. The LQ expresses a region’s share of employment in a specific industry/sector relative to the national employment share for that same industry group. In other words, Nevada’s share of total employment accounted for by mining is double the national share.

Mining’s role in the economy differs across regions within Nevada. For instance, Eureka County’s mining LQ is 143. Lander County’s is 86. Several other rural counties also have high LQs, suggesting that mining’s job share is relatively high. At 0.05, Clark County’s mining LQ suggests that this sector’s share of total jobs in southern Nevada is well below (only about 1/20<sup>th</sup>) the national average. In Washoe County, mining’s LQ is just slightly higher, at 0.15.

Although the information is preliminary and subject to considerable revision, early indications are that seasonal holiday-related hiring approached 9,000 during the final months of the year in Nevada. Specifically, job growth in the trade/transportation industries over the September-December period came to 8,600. While this comes up short of the 13,600 gain over the same period in 2013, we will be taking a second look once benchmark information is available.

December initial claims for unemployment insurance, at 18,100, stand 1.1 percent above a year ago.

As we suggested last month, claims appear to have stabilized, specifically, at a level that is about half of the recessionary peak. Going forward, we expect claims to hover in a fairly narrow range, after taking into account normal seasonal volatility. For all of 2014, initial claims activity is down eight percent, driven by declines during the first several months of the year.

Five industries (accommodation/food services, administrative support, construction, retail trade, and education/health services) account for nearly 60 percent of overall unemployment insurance claimant activity. It is of interest to note that, together, these industries account for essentially the same share of total employment in Nevada (about 55 percent). In other words, the distribution of claims activity across industry groups is very similar to the relative size of those industries. At the height of the recession, those industries hardest-hit, such as construction and accommodation/food services, accounted for a disproportionate share of claims activity. For instance, in December 2008,

construction accounted for one-fourth of claimant activity.

Last month, we provided some insight into the structure of cyclical movements in the labor market via an examination of labor turnover rates, as reported by the Census Bureau's Local Employment Dynamics (LED) Program. This is the rate at which stable jobs begin and end in a given region. The most recent information shows labor turnover hovering in a narrow range just below ten percent.

This month, we look at labor turnover in the State's largest industry, accommodation/food services (AFS). Labor turnover in the industry is somewhat lower than in the economy as a whole. Over time, AFS turnover has averaged about 1.3 percentage points less than in the labor market as a whole, although the gap is narrowing. This is somewhat surprising, given the constantly changing and evolving nature of the AFS industry. However, our analysis also suggests that there is greater seasonality in the industry, as illustrated by pronounced quarter-to-quarter swings in labor turnover. AFS turnover is impacted considerably by such seasonal events as pool season, the convention calendar, etc.
