DETR'S RESEARCH AND ANALYSIS BUREAU
CHIEF ECONOMIST BILL ANDERSON

PRESS RELEASE

For Immediate Release
March 28, 2014

Nevada's Unemployment Rate Drops Again in February

Carson City, NV —Nevada's unemployment rate fell to 8.5 percent in February, which equates to 116,600 people who are jobless. The rate declined 0.2 of a percentage point from January to February and 0.5 of a percentage point since December, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation (DETR).

Carson City had the highest unemployment rate among the state's three metro areas in February at 9.9 percent. Las Vegas had the lowest jobless rate at 8.6 percent. The unemployment rate recorded in the Reno/Sparks area was 8.8 percent. Unadjusted sub-state unemployment rates all fell over-the-year, with the largest decline occurring in Reno/Sparks (-2.0 percentage points). Las Vegas nearly matched that fall with a drop of 1.9 percentage points, and Carson City's decline was 1.5 percentage points. The sub-state unemployment rates are not adjusted for seasonality, so a direct comparison to the statewide adjusted unemployment rate is not valid. For reference, the statewide unadjusted rate was 8.7 percent, down from 10.5 percent a year ago.

"It is encouraging to see the continued improvement in our economy," said Governor Brian Sandoval. "Nevada has now experienced 38 consecutive months of job growth, and the unemployment rate is the lowest it has been since October 2008. While the news continues to be positive, too many in our state remain out of work. We must continue our focus on job creation until every Nevadan who wants a job has one."

Anderson said last month, Nevada's 3.4 percent year-over-year growth rate led the nation; this month the state's annualized growth rate is 3.6 percent.

Anderson added of particular interest are statistics concerning part- and full-time employment. He noted that 88 percent of employment gains over the past year have been in full-time positions, with part-time employment accounting for 12 percent of recent gains.

Among the major worker groups, the unemployment rates for adult men (9.4 percent), whites (8.6 percent), and Hispanics (10.8 percent) showed declines of at least two percentage points over-the-year in February based on a 12 month moving average (12mma). The jobless rates for blacks (15.5 percent) and females (9.8 percent) were nearly unchanged over-the-year. In January 2014, the unemployment rate for males dropped below that for females for the first time since late-2008.

“This month’s report suggests that Nevada continues to show progress in recovery from the recession,” Anderson said. “Employers are continuing to add jobs and consumer confidence continues to show improvement. All and all, the state is moving in a positive direction.”

DETR works in partnership with the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices.

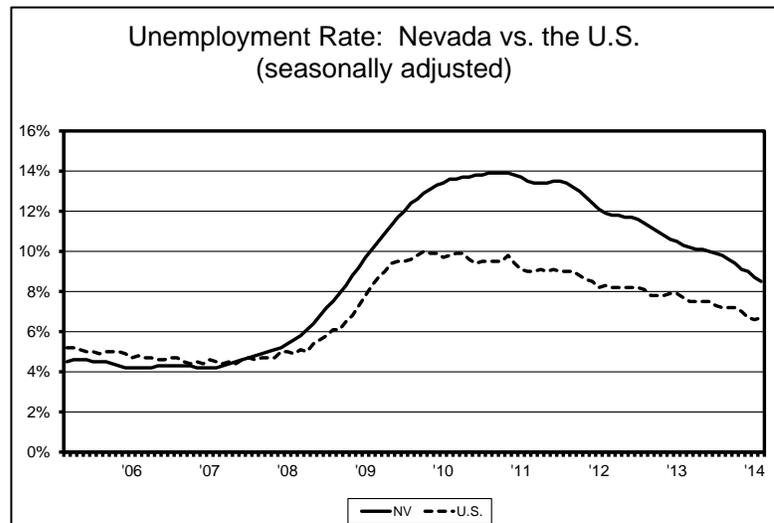

NEVADA LABOR MARKET OVERVIEW February 2014

Both the number of unemployed people (116,600) and the unemployment rate (8.5 percent) declined in February. The jobless rate has fallen by 0.5 percentage point since December. For reference the unemployment rate decline by 0.2 percentage point from January to February. Over-the-year, the number of unemployed people and the unemployment rate were down by 26,000 and 1.8 percentage points, respectively.

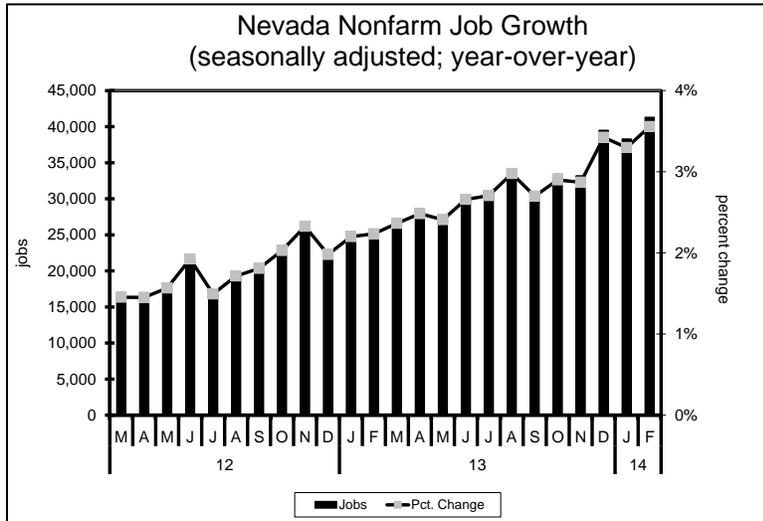

Among the major worker groups, the unemployment rates for adult men (9.4 percent), whites (8.6 percent), and Hispanics (10.8 percent) showed declines of at least two percentage points over-the-year in February based on a 12 month moving average (12mma). The jobless rates for blacks (15.5 percent) and females (9.8 percent) were nearly unchanged over-the-year. In January 2014, the unemployment rate for males dropped below that for females for the first time since late-2008. As many know, Nevada's hardest hit industry during the recession was construction, casting a lot of men into the ranks of the unemployed. Whereas the healthcare sector, which is

composed mostly of women, has grown for decades, even through the recession.

The number of long-term unemployed (those jobless for 27 weeks or more) decreased by 14,500 over-the-year in February to 51,600 (12mma); these individuals accounted for 39 percent of the unemployed. Nationally, the long-term unemployed represent 37 percent of total unemployment.

The number of people employed part-time for economic reasons (sometimes referred to as involuntary part-time workers) fell to an average of 88,900 (12mma) in February, compared to a reading of 94,900 last year. These individuals were working part-time

because they were unable to find full-time work or their hours had been reduced.

According to the monthly household survey conducted by the Census Bureau for the Bureau of Labor Statistics, the jobs returning to the State are mostly full-time work. Of the jobs added over the year, about 88 percent are full-time and 12 percent are part-time. Noticeable gains in full-time work have been apparent since 2011. Whereas, part-time positions have remained relatively stable since 2009.

In February, 30,700 (12mma) people were marginally attached to the labor force, a decline of 4,300 over-the-year. These individuals were not in the labor force, wanted and were available for work, and had looked for a job sometime in the prior 12 months. They were not counted as unemployed because they had not searched for work in the four weeks prior to the survey.

Among the marginally attached, there were 15,200 (12mma) discouraged workers in February, about the same as last year. Discouraged workers are

people not currently looking for work because they believe no jobs are available for them. The remaining 15,500 marginally attached segment had not searched for work for reasons such as school attendance or family responsibilities.

Total nonfarm payroll employment rose by 3,000 in February over-the-month. Job growth averaged 3,400 per month over the prior 12 months. In February, job gains

occurred in construction, trade/transportation/utilities, financial activities, and professional and business services. Jobs losses occurred in mining, education/health services, and other services. The remaining industries of manufacturing, leisure/hospitality, and government were little changed over the month. Total nonfarm payroll employment for January was revised from a monthly gain of 8,000 to 6,900.

Employment in construction increased by 1,200 in February. Over the last 12 months, construction added an average of 500 jobs per month. Financial activities rose by 400, split equally between finance/insurance and real estate/rental/leasing.

In February, trade/transportation/utilities increased by 1,400 jobs, with retail (+1,300) supplying most of the growth. Wholesale trade declined by 200 and transportation/warehousing/utilities added 300. Over the prior 12 months, trade/transportation/utilities grew by an average of 800 jobs per month.

Nevada and Sub-State Nonfarm Jobs: Jan. - Feb. Change

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	7,900	4,900	3,000
Private Sector	3,900	1,000	2,900
Public Sector	4,000	3,900	100
Las Vegas	4,800	3,100	1,700
Reno	2,800	1,700	1,100
Carson City	400	500	-100

In 2013, Las Vegas retail trade matched its previous peak, set in 2007 at 100,100 jobs. Employment in 2014 is trending 6,600 higher than last year's year-to-date average. Retail trade employment in Las Vegas is now expanding after four years of recovery.

Employment in professional and business services increased by 1,600 in February. Within the industry, employment continued to trend up in professional/scientific/technical services (+1,100) and admin/support/waste management/remediation services (+600). Management of companies and enterprises fell by 100, and is down by 700 (-3.5 percent) over-the-year. Over the prior 12 months, professional

and business services added an average of 900 jobs per month.

Employment in education/health services lost 1,300 jobs in February. All of the decline occurred in healthcare/social assistance, while education services was flat. Mining continues to exhibit a slowdown with a loss of 300

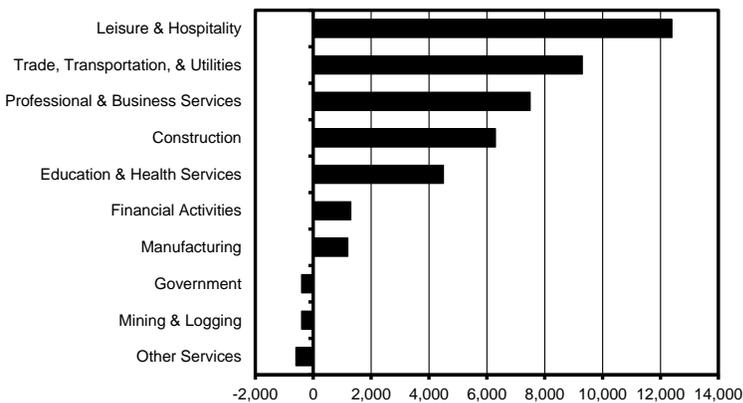

jobs from January to February, and has averaged a loss of 50 over the last 12 months.

Other services lost 600 jobs in February. After experiencing a small bounce back in 2012 of 2.7 percent, or 900 jobs, this industry was little changed in 2013. Over the last 12 months it has averaged a loss of 100 jobs a month.

Carson City had the highest unemployment rate among the State's three metro areas in February at 9.9 percent. Las Vegas had the lowest jobless rate at 8.6 percent. The unemployment rate recorded in the Reno/Sparks area was 8.8 percent.

Unadjusted sub-state unemployment rates all fell over-the-year, with the largest decline occurring in Reno/Sparks (-2.0 percentage points). Las Vegas nearly matched that fall with a drop of 1.9 percentage points, and Carson City's decline was 1.5 percentage points. The sub-state unemployment rates are not adjusted for seasonality, so a direct comparison to the statewide adjusted unemployment rate is not valid. For reference, the statewide

Nevada Nonfarm Job Growth by Industry
(year-to-date; year-over-year)

unadjusted rate was 8.7 percent, down from 10.5 percent a year ago.

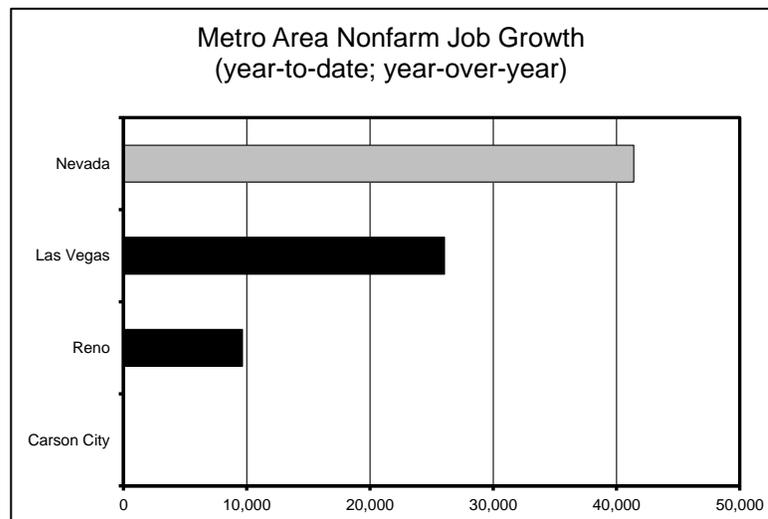

The largest over-the-year percentage increase in employment in the metro areas occurred in Reno/Sparks (+4.4 percent), followed by Las Vegas (+3.4 percent). An over-the-year percentage decrease in employment occurred in Carson City (-0.4 percent). Growth in the Reno/Sparks area has outpaced that of the other metro areas for the last six months.

Last month, Nevada's 3.4 percent year-over-year growth rate led the nation; this month our annualized growth rate is 3.6 percent. Cross state comparisons at the time of this writing were not available. State employment and unemployment for all states will be released by the BLS on March 28, 2014. Check us out on Twitter @NVLaborMarket to find out which state had the highest annualized growth rate in February.

The civilian labor force participation rate in Nevada (63 percent) is approximately equal to that of the U.S. (63.1 percent). The labor force participation rate is the share of the population working or looking for work. Over-the-year the national rate declined by 0.5 percentage point, and Nevada's rate fell by 1.1 percentage point, partially reflecting the higher slack in Nevada's labor market. When not enough jobs are available, some may endure a long job search, while others will give up looking and drop out of the labor force entirely. According to the February Help Wanted On-line report, there are nearly three

unemployed people for every online job advertisement.

Since December, Nevada's LFPR rate increased in spite of the expiration of the Extended Unemployment Compensation (EUC) insurance program. With the end of the EUC, some economists predicted further deterioration in the LFPR, but this has yet to materialize, at least in Nevada. In December, the seasonally adjusted LFPR was 62.7 percent, and in February it was 63 percent.

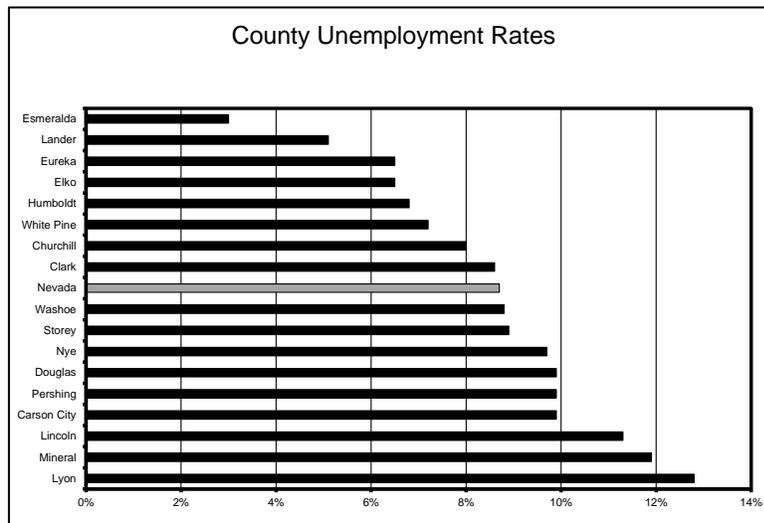

Nationally, the decline in the LFPR started in 2000 after peaking at 67.3 percent; it has since fallen to 63 percent. During 2004-2008, the decline leveled out. Then the Great Recession prompted further decline, leading to the idea of a dichotomous cause of the fall. Both are fairly well known at this point – the ageing of the workforce and a drawn out moderate recovery enticing the marginally attached to remain on the sidelines.

The employment-to-population rate (57.6 percent) increased marginally from February 2013 (57.4 percent), the first

increase in seven years. What's more, is Nevada experienced the sixth fastest population growth rate in the nation from 2012-2013. More Nevadans have jobs and there are more Nevadans. The share of the Nevada population with a job has remained under 60 percent since mid-2009. The labor force (people aged 16+ working or actively looking for work) fell by 5,600 in February since last year -- the number of people with a job rose by 20,500, and the number of unemployed fell by 26,000.

quarter of 2013 and maintained the pace into 2014.

With jobs increasing in most sectors of the economy, workforce development efforts must also have a broad-based focus. Of the nine economic development sectors defined by the Governor's Office of Economic Development (GOED), tourism/gaming/entertainment is the largest with about 382,000 jobs. The next largest economic development focus is health and medical services. The sector has been growing steadily, but apparently not fast enough. Nevada has about two-thirds the national average of healthcare workers given the size of the labor force. Without a robust healthcare industry, Nevada could be missing out on the pensions and savings retirees bring, sometimes from outside the region. When choosing a retirement location, most retirees will consider whether adequate healthcare services are available.

The monthly job figures mentioned above are based on data from the Current Employment Statistics (CES), which uses a sample of businesses to estimate current movements in the labor market. A more accurate, but less timely, count of jobs is available using the Quarterly Census of Employment and Wages (QCEW). The QCEW data is available within six months after the end of each quarter. Cross-state analysis of QCEW employment, shows that Nevada was growing faster than 37 other states in 2013:IIIQ. The CES data indicates that Nevada's employment growth may have accelerated in the last

The aerospace and defense (A&D) sector (12,500) is about the same size as the mining sector (16,200). Mining is facing downward pressure and A&D is about to expand, so this may not be the case for long. Recently, Nevada inked its first deal with a unmanned aerial vehicle company. The number and type of jobs have yet to be specified, but an economic impact study by GOED, estimated the FAA drone test site designation could bring 10,000 direct jobs to the State with an average wage of \$62,000.
