DETR's RESEARCH AND ANALYSIS BUREAU
CHIEF ECONOMIST BILL ANDERSON

PRESS RELEASE

For Immediate Release
August 15, 2014

Nevada's Unemployment Rate Remained at 7.7 Percent in July

Nevada's unemployment rate held steady in July at 7.7 percent, but is still 2.2 percentage points lower than last July. Las Vegas' unemployment rate edged up to 8.2 percent. However, the unemployment rates in both Carson City and Reno remained at their June levels. Carson City's July reading was 7.9 and 7.3 percent in Reno.

"I am pleased to see the overall economic picture for Nevada continues to remain positive," said Governor Brian Sandoval. "Our efforts to diversify the economy and further improve the skills of our workforce remain an important priority along with job growth in key sectors of our economy. We must remain vigilant in our economic development efforts as we continue the slow but steady pace to recovery."

Nevada is still trending 44,600 jobs higher than in July 2013, making this the 43rd month of continuous year over year job growth in Nevada, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation.

July is the sixth consecutive month of year over year gains in excess of 40,000; an occurrence which hasn't happened since mid-2006.

"The same is true in all of Nevada's metropolitan statistical areas," Anderson said. "Las Vegas is up 3,000 jobs over the month, and up 25,700 over the year. Reno job growth was flat this month, but is still up 7,300 year over year. Carson City experienced no monthly growth, but is up 100 compared to July 2013."

Construction payrolls expanded by 7,500 jobs relative to last year, a growth rate of 13.4 percent. Professional and business services added 12,000 jobs, leisure and hospitality employment grew by 10,600, both over the same period.

DETR works in partnership with the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices.

NEVADA LABOR MARKET OVERVIEW July 2014

After 11 months of continuous monthly employment growth, Nevada's labor market took a breather. Typically in July, payrolls experience a contraction of 9,700 jobs. This month, there was a contraction of 9,900, leading to a seasonally adjusted loss of 200 jobs. Private sector payrolls were up 600 over the month, but this was offset by a loss of 800 jobs in the government sector. The loss of 200 jobs in the State is equivalent to a growth rate of -0.02%, a negligible portion of Nevada's employment level of 1.22 million.

However, on a year-over-year (YOY) basis, Nevada is still trending 44,600 jobs higher than in July 2013, making this the 43rd month of continuous YOY job growth in Nevada. This is the sixth consecutive month of YOY gains in excess of 40,000; an occurrence which hasn't happened since mid-2006.

The same is true in all of Nevada's metropolitan statistical areas. Las Vegas is up 3,000 jobs over the month, and up 25,700 over the year. Reno job growth was flat this month, but is still up 7,300 YOY. Carson City experienced no monthly growth, but is up 100 compared to July 2013.

employment in the Silver State, with a location quotient of 2.2. The manufacturing industry has the largest jobs multiplier in the state, at 3.1. What this means is that for every manufacturing job that is generated in the state, 2.1 additional jobs are generated in the region. These additional jobs encompass everything from ancillary positions in that industry to increased demand for services such as grocery and

As mentioned earlier, employment in the private sector is trending positively. Construction payrolls expanded by 7,500 jobs relative to last year, a growth rate of 13.4 percent. Professional and business services added 12,000 jobs. Leisure and hospitality employment grew by 10,600 over the same period.

retail stores. Clean energy has the second highest jobs multiplier at three, followed by agriculture at 2.8.

This month, we are taking a closer look at the structure of the sectors which the Governor's Office of Economic Development identified as being targets for growth in Nevada. Of the 9 sector councils, Tourism/Gaming/Entertainment (TGE) is the largest, with almost 382,000 jobs. The location quotient for this sector, which measures the relative concentration of jobs in this industry in the state to that of the nation, is 2.5, indicating that, unsurprisingly, TGE is a relatively large part of Nevada's economy. The same is true of mining

The state's unemployment rate was unchanged over the month at 7.7 percent. However, it is down 2.2 percentage points relative to the same period last year. Two out of three of Nevada's MSAs had stable non-seasonally adjusted unemployment rates¹ as well.

¹ Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence,

Carson City and Reno held steady at 7.9 and 7.3 percent, respectively. Las Vegas' unemployment rate rose 0.3 percentage points, to 8.2 percent.

The Bureau of Labor Statistics has released data for alternative measures of labor underutilization for the year ending with the second quarter of 2014. U-3, which averaged 8.8% in the year ending 2014:IIQ, is the total of unemployed workers as a percentage of the civilian labor force. This is most similar to the official rate, which also measures 8.8%² in this period. U-4 adds discouraged workers to U-3, bringing the underutilization level to 9.7%. Discouraged workers are

comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 7.8 percent in June, up from 7.7 percent in May and down from 10.3 percent in June 2013. ² Note that the unemployment rate (U-3) that is shown is derived directly from the CPS, because this is the only source of data for the various components of the other five measures. As a result, the U-3 measure can differ from the official State unemployment rate. The official rate is developed from statistical models that greatly improve the reliability of the labor force and unemployment estimates.

those people who would like to work, but have stopped looking because they believe there are no jobs to be filled. Marginally attached workers, the addition to U-5, totaling 10.5%, have not searched for work for reasons other than the belief that there are no jobs to fill. Finally, U-6 adds part-time workers (working less than 35 hours per week) who would rather be working full-time, but cannot due to economic reasons including having their hours cut or being unable to find full-time work. This leads to a U-6 underutilization rate of 16.2%. Nevada was within the highest three positions

in all six measures of labor underutilization through 2014:IIQ.

According to the latest data from the Current Population Survey, more than 54,000 of Nevada's unemployed are persons classified as job losers. That is to say that these individuals involuntarily lost their last job. This includes temporary and non-temporary layoffs, but does not include persons who completed temporary jobs. This is less than half of the peak, 115,700 annual average job losers, which occurred in June 2010.

A lot of attention has been given to the issue of "good" jobs versus "bad" jobs in Nevada. Over the 2010 to 2014 period, Economic Modeling Specialists, Inc. are estimating a net change in employment of 87,400 jobs. This came about from an addition of 110,500 jobs in growing industries and a loss of 23,100 jobs

in declining industries. Our analysis shows that there is only a slight wage differential (<\$7,000) between jobs in the growing and declining industries. Thus, Nevada is gaining jobs in industries which pay slightly less than the industries where we are losing employment.

Nevada and Sub-State Nonfarm Jobs: June - July Change			
	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	-9,900	-9,700	-200
Private Sector	-4,300	-4,900	600
Public Sector	-5,600	-4,800	-800
Las Vegas	-5,000	-8,000	3,000
Reno	-2,400	-2,400	0
Carson City	0	0	0

Typically, in examining wage trends, our focus has been on average earnings. However, the Census Bureau's Local Employment Dynamics (LED) Program offers insight into underlying trends. The latest available information shows that average monthly earnings for all employees is just over \$3,700. However, new-hire wages are a bit above \$2,600, approximately 71 percent of that for all workers. This certainly supports the fact that longer-term employees are paid more than those with less seniority on the job. In fact, looking at trends over the past several years, new-hire wages consistently total about two-thirds of the overall average.

The Federal Housing Finance Agency has released the latest data for their House Price Index (base: 1990:IQ = 100), through the first quarter of the year. To give this some context, this index peaked for

Nevada during the pre-recessionary period in the first quarter of 2006 at 276.02, well above the national reading of 220.34. During the economic downturn, Nevada fell much harder than the nation, bottoming out in 2011:IVQ at 110.19; whereas the U.S. only fell to 180.2 in the same period. The index reading for Nevada is 167.61 for 2014:IQ, which is a growth rate from the trough reading of 52.1 percent. For comparison, the index for the U.S. grew by only 15.1 percent over the same period. What this indicates is that Nevada's housing prices are growing in the post-recessionary period, and the gap between Nevada and the U.S. is narrowing.

The Conference Board's Consumer Confidence Index ticked up 4.5 points in July, from 86.4 last month to 90.9. This is the third consecutive monthly increase in the index, and the highest reading since October 2007 (95.2). According to The Conference Board, the upward trend in consumer confidence suggests that economic growth will likely continue into the second half of the year. This is good news for Nevada, in that increased consumer confidence in the nation leads to increased spending of disposable income, which generally benefits Nevada to a greater extent than other states.

Nevada

Employment & Unemployment

Estimates for July 2014

Unemployment Rates:

Nevada Statewide (Seasonally Adjusted)	7.7%
Las Vegas-Paradise MSA	8.2%
Reno-Sparks MSA	7.3%
Carson City MSA	7.9%
Elko Micropolitan Area	5.3%
United States (Seasonally Adjusted)	6.2%
California (June) (Seasonally Adjusted)	7.4%

Employment estimates are produced by the Current Employment Statistics program.

Labor Force estimates are produced by the Local Area Unemployment Statistics program.

Research and Analysis Bureau, Nevada Department of Employment, Training and Rehabilitation operates these programs in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.
