CHIEF ECONOMIST BILL ANDERSON

PRESS RELEASE

For Immediate Release
July 18, 2014

Nevada's June Unemployment Rate Drops to 7.7 Percent

Carson City, NV —Nevada's unemployment rate fell to a seasonally adjusted 7.7 percent in June, the lowest it has been in nearly six years. The unadjusted unemployment rate fell in two of the state's three metro areas this month. The Las Vegas/Paradise MSA held steady over the month at 7.9 percent, but is down 2.5 percentage points relative to June 2013. Reno/Sparks and the Carson City MSA each fell by 0.1 percentage points to 7.2 and 7.9 percent, respectively. Over the year, Reno/Sparks is down 2.8 points, and Carson City is down 2.5 points.

"I am pleased with the steady improvements reflected in the most recent labor market report," said Governor Brian Sandoval. "Unemployment numbers are down and we continue to see job growth in key sectors of our economy. Although this positive news is welcomed, we must remain vigilant in our economic development efforts to continue moving Nevada forward."

Nevada added a seasonally adjusted 5,300 jobs in June, which is the 11th month to month employment gain, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation (DETR). The construction industry had the highest annual growth rate, at 10.5 percent, adding 5,900 jobs relative to June 2013.

"On a year-over-year basis, employment growth has been positive for the past 42 months," Anderson said. "All of Nevada's metro areas added jobs to the payrolls in June, relative to the same time last year. Through the first half of this year, job levels are trending a bit in excess of 40,000 higher than a year ago. Should these trends hold through the second half of the year, we will have added about 100,000 new jobs over the 2010-2014 period. Going forward, improving underlying conditions in the national labor market should pave the way for continued advances in Nevada. By the end of next year, our expectations are for Nevada employment to be approximately 95 percent of the pre-recessionary peak."

DETR works in partnership with the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices.

NEVADA LABOR MARKET OVERVIEW June 2014

In a month where we would have expected a contraction of 3,700 jobs, Nevada payrolls increased by 1,600, leading to a seasonally adjusted gain of 5,300 jobs in June. This is the 11th straight month-to-month employment gain for Nevada.

for a growth rate of 3.1 percent. The Reno/Sparks MSA had the highest year-over-year growth rate this month, at 3.8 percent, adding 7,500 jobs. Finally, Carson City added 100 jobs over the year, up 0.4 percent relative to June of 2013.

Nevada and Sub-State Nonfarm Jobs: May - June Change

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	1,600	-3,700	5,300
Private Sector	5,700	3,400	2,300
Public Sector	-4,100	-7,100	3,000
Las Vegas	-1,700	-3,400	1,700
Reno	600	500	100
Carson City	100	0	100

All but one of Nevada's super sectors added employment over the year. Construction led the way again this month, adding 5,900 jobs relative to June 2013, for a growth rate of 10.5 percent. Professional and business services added 11,200 jobs (+7.5 percent) over the year, and payrolls in the leisure and hospitality sector increased by 11,300 jobs (+3.5 percent). The only super sector to lose employment over the

Further, since the beginning of 2013, there was only one month (July 2013) in which a negative month-to-month employment change was recorded. On a year-over-year basis, employment growth has been positive for the past 42 months. At 1.22 million jobs, this is the highest reading for Nevada's labor market since November 2008.

Nevada's metros all added jobs to payrolls this month relative to the same time last year. The Las Vegas Metropolitan Statistical Area (MSA) added 26,100 jobs,

year this month was mining, which fell by 300, or two percent.

consecutive month of year-over-year declines in the rate.

While employment and unemployment are moving in encouraging directions, there is a third component which we will be highlighting this month...Nevada's labor force. The labor force is defined as those individuals who are either working or actively looking for work. It is from these statistics on the labor force that both the employment rate and unemployment rate are derived. Thus, fluctuations in the labor force will affect

The upturn in construction employment has coincided with a pickup in housing starts in Nevada, although some perspective is necessary. Prior to the recession, starts peaked at average annual levels of nearly 50,000. As Nevada's housing sector unraveled, annualized starts tumbled to nearly 5,000. Since then, activity has more than doubled, but at 11,000 annualized starts of late, recent trends fall well short of our boom results, which is arguably a good thing.

these rates. When we consider information obtained through the Local Area Unemployment Statistics (LAUS) Program, we see that since 2012, Nevada's non-seasonally adjusted labor force has fallen on a

Nevada's seasonally adjusted unemployment rate fell 0.2 percentage points this month, to 7.7 percent, the lowest rate recorded since August 2008. This is the 36th consecutive month in which the unemployment rate either declined or remained steady on a month-to-month basis. Further, this is the 41st

year-over-year basis in 28 of the past 30 months. Through the first six months of the year, Nevada's labor force is down 3,600 individuals, (-0.3 percent). Over the same period, employment is up 25,600 (+2

percent)¹ and the number of unemployed Nevadans is down 29,200 (-20.6 percent). What this indicates is that declines in the unemployment rate are being caused by both growth in employment and declines in the labor force.

The unadjusted unemployment rate fell in two of the state's three MSAs this month². The Las Vegas/Paradise MSA held steady over the month at 7.9 percent, but is down 2.5 percentage points relative to June 2013. Reno/Sparks and the Carson City MSA each fell by 0.1 percentage points to 7.2 and 7.9 percent, respectively. Over the year, Reno/Sparks is down 2.8 points, and Carson City is down 2.5 points.

With information through the first half of this year, now is an opportune time to assess our progress during the recovery period, as it pertains to job gains. Available evidence suggests that Nevada's labor market bottomed out in 2010. In 2011, job growth, once again, turned positive.

¹ Employment, as defined in the Local Area Unemployment Statistics Program, is conceptually different from, and is estimated in a different manner than, the monthly Current Employment Statistics Program data reported above.

² Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 7.8 percent in June, up from 7.7 percent in May and down from 10.3 percent in June 2013.

Specifically, nearly 12,000 private sector jobs were added in our first year of recovery. 2012 brought with it an additional 20,000 jobs, followed by another 29,000 private sector jobs last year. Through the first half of this year, job levels are trending a bit in excess of 40,000 higher than a year ago. Should these trends hold

through the second half of the year, we will have added about 100,000 new jobs over the 2010-2014 period. However, as we've discussed in the past, we are looking for a slight downward revision in our monthly employment estimates when the year-end benchmarking process is completed. We expect that gains over the recovery period will probably be closer to 90,000 once the revisions are made. To put these gains in perspective, the State lost about 175,000 jobs over the 2007-2010 period.

When we consider Nevada's track record over the last decade, it is obvious that the State's labor market moves in an extreme fashion. Over the recession, Nevada was the hardest hit in terms of employment

losses. Nevada lost 13.5 percent of its employment between the peak in 2007 and the trough in 2010 (annual averages), the largest decline in the nation. However, over the recovery period, Nevada has bounced back quite well. When we consider the first five months of this year relative to the same period in 2010, we see that Nevada's employment has grown by eight percent, the seventh-highest rate when compared to the other states.

In order to look at these labor market movements from another point of view, we can consider the information obtained through the Quarterly Census of Employment and Wages (QCEW) Program, which provides a nearly complete job count based upon quarterly wage records submitted by employers whose employees are covered under the Unemployment Insurance System. Because generating this information is a time-consuming process, it is only available with a 4-5 month lag. Examining this information over time, and for all 50 states (plus the District of Columbia), highlights Nevada's

relative performance during the pre-recessionary boom, through the downturn, and into the early stages of the recovery. In the years preceding the economic downturn, Nevada led the country in private sector employment growth, with the highest employment growth rate in the country in 2004 and second highest in 2005 (6.4 percent each year). Conversely, during the recession, Nevada was the most affected state in terms of private

sector employment growth. In fact, Nevada's employment growth was the lowest of all 50 states in 2009 (-10.1 percent) and 2010 (-2.8 percent). Nevada has gradually regained lost ground over the past two years. In 2011 the private sector grew at a rate of 1.2 percent, faster than 14 other states; and in 2012 we grew at a rate of 1.9 percent, faster than 24 other states. When we consider 2013, the latest

available data, we can see that Nevada's recovery is steadily continuing. Over the year, the private sector has grown at a rate of 2.7 percent, relative to 2012. This is a higher growth rate than 38 other states.

The Local Employment Dynamics (LED) series, as constructed by the US Census Bureau, offers insight into many of the underlying trends in the labor markets of the states. This month, we highlight two LED series. The first is the latest data on worker inflows and outflows (2011), detailing where individuals live versus where

they work. Our analysis shows that over 1.07 million workers in Nevada's employment base also reside in Nevada, while an additional 51,000 individuals commute into Nevada for work. Worker outflows, those individuals who commute out of the State for work, total just over 33,000.

The second LED series we are highlighting this month provides valuable information concerning teen and young adult employment. Data from the third quarter of each year allows us to analyze summer job trends. In 2006, prior to the recession, employers added more than 7,000 young workers, aged 14 to 21, to their payrolls. From 2007 to 2009, fewer young workers found employment during the summer, as they faced a tougher labor market, weakened by the recession. Further, competition from older and more experienced age groups for entry-level jobs exacerbated the already recalcitrant job situation for this age group. From 2010 to 2012, approximately 5,000 workers aged 14 to 21 years were added to payrolls in the third quarter of each year. In 2013, the number of younger workers added was almost 6,600, nearing pre-recession levels.

Average state personal income for the first quarter of 2014 totaled \$111.3 billion. This is the highest recorded reading for this series since state personal income data was first collected in 1978. Relative to the same period in 2013, personal income has grown by \$4.7 billion over the year, an annual growth rate of 4.4 percent.

The Bureau of Economic Analysis has released gross state product (GSP) data for 2013. GSP is the value added in production by the labor and capital in all industries located in a state. Nevada's GSP totaled just over \$132 billion in 2013, 2.4 percent higher than in 2012. While this growth rate is slower than in 2012 (4.5 percent), Nevada's nominal GSP stands only 0.1 percent below its pre-recession level in 2007. Provided that growth is maintained through 2014, which recent employment trends would suggest, record levels of GSP could be reached this year.

Every month, the U.S. Bureau of Labor Statistics (BLS) uses results from the national Current Population Survey (CPS) to estimate the number of people changing their labor force status based on three labor force categories – employed, unemployed, or not in the labor force. Since the end of the recession in 2009, there has been a steady increase in the number of people in the category of “employed to employed.” Those in this category were employed in both the current and previous CPS monthly sample. They either kept their job or were able to secure a new job in between the monthly survey samples. Higher rates of people in this category indicate a strengthening labor market where people are able to maintain their employment. Since the low point in January 2010, the U.S. has seen an increase of those in this category from 132.1 million to 140 million in June of 2014 (an increase of 7.8 million). The previous high

point was in December of 2007 with 140.5 million people maintaining their status as employed, just 540,000 above current levels.

Going forward, improving underlying conditions in the national labor market should pave the way for continued advances in Nevada. Specifically, we are looking for additional job gains in the Silver State through 2015. By the end of next year, our expectations are for Nevada employment to be approximately 95 percent of the pre-recessionary peak.
