Nevada's Unemployment Rate Down to 7.9 Percent in May

Carson City, NV — Nevada's unemployment rate fell to a seasonally adjusted 7.9 percent in May, the lowest it has been in nearly six years. The number of unemployed individuals stands at 108,000, which is 19,000 less than May 2013.

“Once again we have received positive news from the Nevada labor market report,” said Governor Brian Sandoval. “Our unemployment rate, which hit nearly 14 percent during the recessionary peak, has fallen below 8 percent for the first time since September 2008. Although encouraging, there remains much work to be done. We must continue our economic development and diversification efforts until the needs of Nevada's unemployed and underemployed have been met.”

The non-seasonally adjusted unemployment rate for each of Nevada's metro areas also saw a decline relative to a year ago, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation. The Las Vegas unemployment rate registered at 7.9 percent in May, while Reno/Sparks area stands at 7.4 percent. Carson City's unemployment rate sits at 8 percent.

All of Nevada's metropolitan statistical areas (MSA) experienced job growth in May relative to a year ago. The Las Vegas MSA, the largest in Nevada, added 25,900 jobs relative to May of 2013, a growth rate of 3.1 percent. Reno recorded the highest year over year growth rate this month at 3.6 percent, adding 7,100 jobs to non-farm payrolls. Finally, Carson City added 200 jobs bringing its growth rate to 0.7 percent on an annualized basis.

Nevada was expected to grow by 5,900 jobs in May (not seasonally adjusted). However, actual growth totaled 8,300 jobs, which resulted in a 2,400 seasonally adjusted gain, Anderson said.

“Preliminary estimates so far this year suggest that job levels are trending in excess of 40,000 higher than a year ago,” Anderson said. “The state's job base is growing at a pace more than double the national average. All told, Nevada is home to a seasonally adjusted 1,215,000 jobs as of May, which is the highest employment level reading since December of 2008.”

The construction industry experienced the highest job growth rate of any super-sector in May, growing by 12.5 percent, an increase of 7,000 jobs relative to May 2013. At a seasonally

adjusted 63,200, this is the highest employment reading for the construction sector since January of 2010.

“While Nevada’s unemployment rate is still among the highest in the country and higher than the nation’s 6.3 percent rate, all indications suggest the state’s economy is on the mend,” Anderson said. “After peaking at over 194,400 at the height of the recession in October 2010, the number of unemployed in Nevada has declined by over 84,400. Initial unemployment insurance claims are steadily decreasing and weekly wages are on the rise, though not as strong as we would like.”

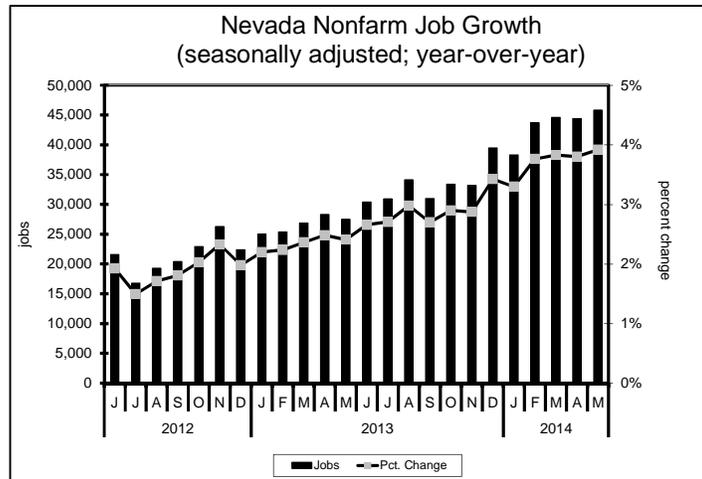

DETR is comprised of the Employment Security Division, Equal Rights Commission, Rehabilitation Division, the Information Development and Processing Division and the Research and Analysis Bureau. DETR works in partnership with the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices.

NEVADA LABOR MARKET OVERVIEW May 2014

Nevada's labor market continued on its path towards recovery in May. Job readings continued to expand. Preliminary estimates so far this year suggest that job levels are trending in excess of 40,000 higher than a year ago. The State's job base is growing at a pace more than double the national average. Initial claims for unemployment insurance fell 23 percent in May from a year ago and have declined in 51 of the past 54 months. The jobless rate fell below eight percent for the first time in close to eight years. After peaking at over 194,400 at the height of the recession in October 2010, the number of unemployed in Nevada has declined by over 84,400.

Still, despite a number of positive signs, the State's jobless rate remains amongst the highest in the nation. Also, wage trends leave something to be desired. Although increasing in nominal terms, inflation is eroding purchasing power.

Nevada payrolls increased 2,400 over the month from April to May (seasonally adjusted); the 10th consecutive monthly gain, going back to August 2013. This

constitutes a gain of 45,800 jobs relative to the same period in 2013; which is the 41st consecutive month of year-over-year (YOY) gains recorded in the Silver State. This is the largest single YOY gain since September of 2006.

All told, Nevada is home to a seasonally adjusted 1,215,000 jobs as of May, which is the highest employment level reading since December of 2008. Nevada was expected to grow by 5,900 jobs in May (not seasonally adjusted). However, actual growth totaled 8,300 jobs, which resulted in the 2,400 seasonally adjusted jobs cited above.

The job growth figures typically reported in our *Overview* represent the net effect of thousands of

Nevada and Sub-State Nonfarm Jobs: Apr. - May Change			
	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	8,300	5,900	2,400
Private Sector	7,000	4,900	2,100
Public Sector	1,300	1,000	300
Las Vegas	3,900	3,200	700
Reno	900	1,100	-200
Carson City	100	100	0

individual labor market “transactions.” In any given quarter, in excess of 100,000 jobs may be gained and/or lost in Nevada. The Bureau of Labor Statistics’ Business Employment Dynamics (BED) series offers insight into these transactions and allows us to examine gross job gains and losses from a variety of different perspectives, albeit on a lagged basis, and provides insight into labor market “churn.”

For instance, in 2013:IIIQ, there were 61,300 gross job gains in Nevada’s labor market. At the same time, there were 58,000 gross job losses, for a net gain of close to 3,400 jobs. This month, we take a detailed look at labor market churn related solely to business establishment openings and closings. During last year’s third quarter, 10,100 jobs were added as a result of new business openings. On the flip side, business closings resulted in the loss of 8,400 jobs. The net result was a net gain of more than 1,600 jobs due solely to business openings/closings. As an aside, new jobs due to openings have exceeded job losses from closings for eight consecutive quarters.

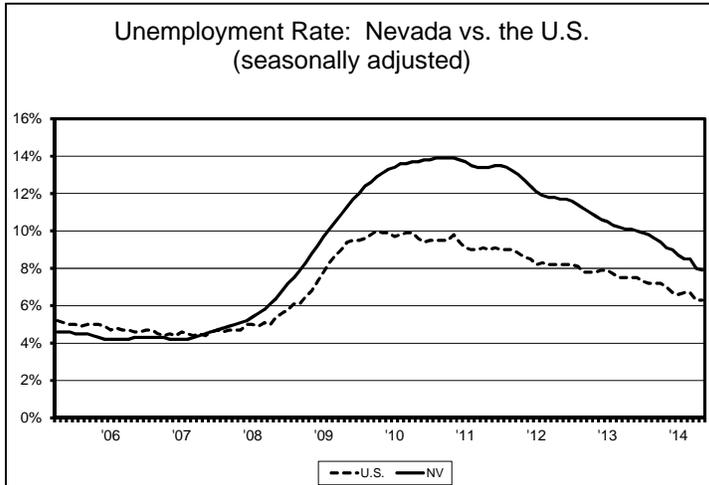

The Governor’s Office of Economic Development recently reported that nearly 4,800 jobs were created as a result of State economic development efforts in 2013. Recent BED trends, as they relate to gross job gains attributable to new openings, certainly are consistent with these

results.

On a related note, the number of employers in Nevada is on the rise. In fact, at 59,300 in this year’s first quarter, the number of employers participating in the State’s Unemployment Insurance Program, stands 3.1 percent higher than a year ago. This represents the most pronounced advance since the first quarter of 2008. All told, gains have been recorded in each of the past 11 quarters.

The latest available data shows that Nevada’s average weekly wages for the fourth quarter of 2013 increased to \$885, up 0.9 percent relative to 2012:IVQ. Over this same period, inflation has grown at 1.2 percent, indicating that Nevadans are relatively less well off, in real terms, than in the last quarter of 2012. When we consider 2013 as a whole, relative to 2012, we see that wages have grown by 1.1 percent, to \$849. However, inflation has grown at a rate of 1.5 percent over the year, indicating that Nevada’s average weekly wages are not keeping up with inflation.

Nevada’s seasonally adjusted unemployment rate ticked down

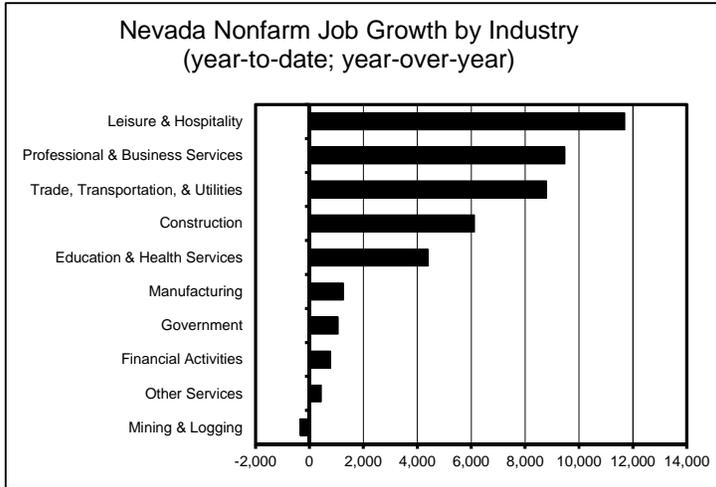

again in May to 7.9 percent, from eight percent in April. This is the lowest reading since September of 2008. Nevada continues to experience a higher unemployment rate than the nation, which stands 1.6 percentage points lower than Nevada, at 6.3 percent. However, the gap between Nevada's rate and that of the US is the smallest it has been since August of 2008. Further, the number of unemployed persons in the Silver State is down by nearly 19,000, to 108,000, relative to May of 2013, a decline of 14.7 percent.

When looking at the estimate of the number of people unemployed in the State, reported above, it is important to note that it is not synonymous with those individuals receiving unemployment insurance benefits. The methodology used to estimate the number of unemployed in the State attempts to identify the population of individuals without a job, but currently (and actively) searching for work. It is useful to compare this estimate to the number of Nevadans actually receiving unemployment benefits. In comparing these series through the

Great Recession until the present, one clear trend is the significant gap between the total number of people receiving unemployment benefits and the total number of unemployed people in the State. This is because not everyone who is unemployed is eligible for unemployment benefits; for example, new entrants to the workforce who are looking for work are not eligible for unemployment benefits, but could be considered unemployed.

One significant factor affecting the number of people receiving unemployment benefits is the end of federally paid extended benefits under the EUC program as of the end of 2013. The expiration of this program affected approximately 17,000 people at the time the program ended, and dropped the share of unemployed persons who received unemployment benefits from 40 percent to 29 percent in May, slightly below the January-March national average of 30 percent.

There has been considerable public debate in Nevada revolving around such issues as education, economic development, and workforce initiatives. There have been numerous catalysts for the increased emphasis on these issues, but, for our purposes, one stands out. As we move up the educational attainment ladder, unemployment rates tend to decline. For instance, in 2013, the unemployment rate for

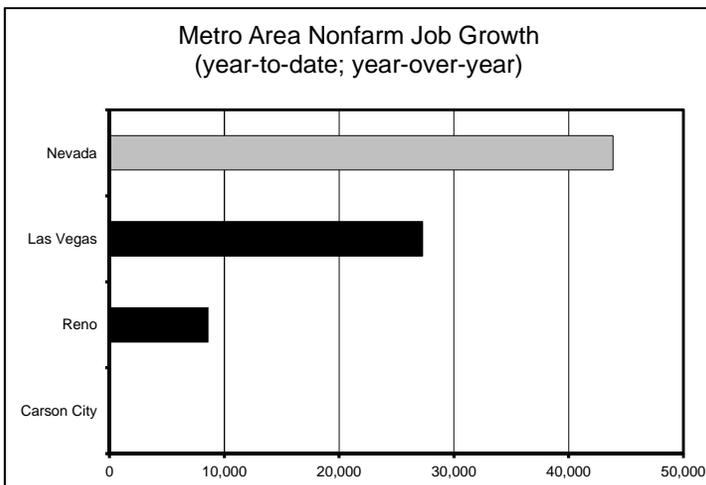

those Nevadans with at least a Bachelor's degree was 4.8 percent. For those with less than a high school diploma, the jobless rate was 12.6 percent.

This month, we examine the correlation between state unemployment rates and the impacts of the housing market "bust." Evidence suggests that there is a noticeable negative correlation between state unemployment rates and the magnitude of the impact of the housing market bust on prices (as measured by the ratio of FHFA home prices in 2013 relative to

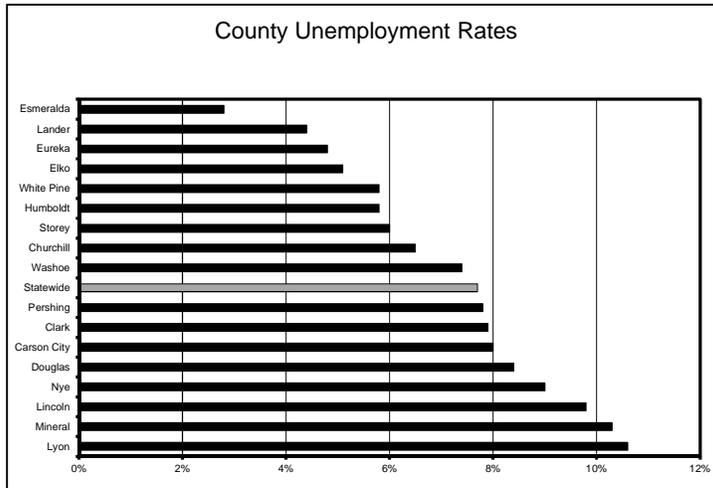

2007). For instance, Nevada had the second highest unemployment rate in the nation, at eight percent, in April. At the same time, at just 0.55, the ratio of 2013:2007 housing prices was the lowest in the nation. North Dakota, on the other hand, had the lowest unemployment rate in the nation during April, 2.6 percent; while also holding the highest housing price ratio in the U.S., at

1.28.

The construction industry experienced the highest job growth rate of any super-sector this month, growing by 12.5 percent, an increase of 7,000 jobs relative to May 2013. At a seasonally adjusted 63,200, this is the highest employment reading for the construction sector since January of 2010. Leisure and Hospitality added 13,100 jobs relative to May 2013, a growth rate of 4.1 percent, Professional and Business Services added 9,300 jobs YOY, up 6.2 percent, and Trade, Transportation, and Utilities added 8,300 jobs, or 3.8 percent growth.

All of Nevada's metropolitan statistical areas experienced growth in May relative to a year ago. The Las Vegas metro, the largest in Nevada, added 25,900 jobs relative to May of 2013, a growth rate of 3.1 percent. Reno recorded the highest YOY growth rate this month at 3.6 percent, adding 7,100

jobs to non-farm payrolls. Finally, Carson City added 200 jobs bringing its growth rate to 0.7 percent on an annualized basis.

The non-seasonally adjusted unemployment rate for each of Nevada’s metro areas declined noticeably relative to a year ago.¹ The Las Vegas MSA fell 2.1 points to 7.9 percent from last May. Similarly, Carson City had a reduction of 2.1 points to a rate of eight percent. The Reno/Sparks metro area saw a slightly larger drop of 2.3 points, ending up at 7.4 percent in May.

The three metro areas have seen steady declines in unemployment since their peak in 2010. At the height of the recession, the Las Vegas MSA had a May unemployment rate of 13.7 percent, resulting in an improvement of 5.8

percentage points. The Reno/Sparks MSA saw a similar decline (5.5 points) over the period. The unemployment rate for the State’s capital was 12.6 percent in May 2010 and has declined 4.6 points since.

The Bureau of Economic Analysis has released Gross Domestic Product data for the first quarter of 2014. Overall, the national economy is continuing to grow modestly, despite the one percent tick down that was recorded in the first quarter. This is likely related to the unseasonably cold weather of this past winter. The improvements in Nevada’s economy are consistent with the national trends, and we can expect continued, measured growth.

¹ Unemployment rates for the State’s metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State’s seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State’s unadjusted rate – 7.7 percent in May, up from 7.3 percent in April and down from 9.8 percent in May 2013.
