DETR's RESEARCH AND ANALYSIS BUREAU
CHIEF ECONOMIST BILL ANDERSON

For Immediate Release
November 21, 2014

Nevada's Unemployment Rate Drops to 7.1 Percent in October

Carson City, NV —Nevada's unemployment rate continued to fall in October, registering at a seasonally adjusted 7.1 percent, the lowest it has been since June 2008. October marks the 45th consecutive month of year-over-year unemployment rate declines, dating back to February 2011. The unemployment rate in October 2013 stood at 9.4 percent.

"I am pleased to see further signs of underlying economic progress for the Silver State. Through the first ten months of the year, we have added 40,000 new jobs across the state, putting more Nevadans back to work. While we continue to be one of the fastest growing states in the nation, we must remain focused on workforce development and private sector job creation so that all Nevadans can find good-paying, sustainable employment. We are moving in the right direction and must continue to make positive strides toward building a stronger, more vibrant, Nevada," said Governor Brian Sandoval.

Nevada's three metropolitan areas also experienced positive results in October's unemployment readings. Las Vegas' unemployment rate fell to 6.8 percent, down 2.8 percentage points relative to last year. This is the single largest unemployment rate decline on a year-over-year basis on record for Las Vegas (with information back to 1990), said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation (DETR). The Reno-sparks unemployment rate fell 2.7 percentage points over the year, to 6.1 percent, the lowest October reading since 2007. Unemployment in Carson City fell by 2.7 percentage points relative to October 2013, to 6.8 percent. This is the largest year-over-year decline for Carson City since March 1999.

"Nevada's job growth rank has been steadily climbing, outperforming 48 other states in terms of employment growth of late," Anderson said. "After a long delay, this strong employment growth has finally led to an accelerated decline in the state's unemployment rate."

Anderson also noted that for the first time since 2007, the unemployment rate for all 17 of Nevada's counties fell below 10 percent in September and October.

DETR works in partnership with the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices.

NEVADA LABOR MARKET OVERVIEW October 2014

After reporting seasonally adjusted job gains in 13 of the last 14 months, Nevada lost some ground in October, based upon monthly employment estimates. In a month where we would expect to add 8,300 jobs to payrolls, only 1,000 were added, leading to a seasonally adjusted loss of 7,300 jobs over the month. However, when we consider October's reading relative to the same month last year, we see that Nevada remains 28,600 jobs ahead, for a growth rate of 2.4 percent. This comes after eight straight months of annual gains in excess of 40,000. Further, when we consider 2014

year-to-date, Nevada is trending 41,300 jobs higher than in the same period in 2013, up 3.5 percent. The latter trends are more likely representative of the underlying health of Nevada's labor market than the pronounced deceleration evident in October.

Employment declines were realized in Nevada's two largest MSA's. Las Vegas fell by 5,300 jobs over the month, but remains up 19,000 jobs over the year, an annual growth rate of 2.2 percent. Reno Sparks fell 3,400 jobs over the month, but is ahead of last October by a coincidental 3,400, up 1.7 percent. Carson City held steady over the month

and is up 100 jobs over the year for a growth rate of 0.4 percent.

After eight straight months in which construction was the fastest-growing super sector in the State, professional and business services overtook it in October, adding 9,500 jobs over the year, for a growth rate of 6.4 percent. Construction fell to the second highest growth rate, 3.5 percent, with the addition of 2,100 jobs relative to the same month last year. The manufacturing sector added 1,300 jobs over the year, growing 3.2 percent. No super sector experienced year-over-year job losses this month, though mining was flat.

While our focus is generally on jobs, a regular examination of occupational trends helps to shed additional light on labor market dynamics. This month, we look at those occupations which are adding employment and pay above-average wages (approximately \$20 per hour for the State as a whole, depending on the data source).

Within this high-wage group, the occupation with the largest employment gain over the 2010-2014 period is general and operations managers, up about 1,500 positions. Average hourly wages in this occupation is \$50 per hour. Registered nurses (with an average hourly wage of \$38 per hour) showed the second-strongest growth in adding approximately 1,300 positions over the past four years. The third-fastest growing occupation is carpenters, who receive an average hourly wage of \$24 and expanded by 1,100 jobs since 2010. All told, the top ten occupations, in terms of growth, added about 9,200 positions over the study period, with average hourly wages of nearly \$30.

Another barometer we utilize for analyzing trends in the labor market is the change in the number of employers in the State. All told, there were 60,500 employers in this year's third quarter, the second-highest reading on record. This translates into an increase of 2,400 relative to the same period last year, a growth rate of 4.2 percent. Through

the first three quarters of the year, employer counts are trending 3.8 percent higher than in the same period a year ago, which makes it likely that 2014 will be the third consecutive year of employer gains in the Silver State. For context, employer counts were up by 1.7 percent in 2012 and 1.2 percent in 2013.

With data through the second quarter of 2014, we see that personal income has continued to trend upward in the Silver State. The latest reading stands at \$113.5 billion, which is 3.9 percent higher than last year's second quarter reading and the highest value on record since the series began in 1948. This series has increased, relative to a year ago, in 15 of the past 16 quarters. Through the first half of this year, personal income is trending 3.7 percent higher than during the first half of 2013.

unemployment rate has continued its downward trend this month¹. October's seasonally adjusted reading of 7.1 percent is down 2.3 percentage points relative to October 2013. This is the lowest unemployment rate in the Silver State since June 2008 and the lowest October unemployment rate since 2007. Further, this is the 45th consecutive month of year-over-year unemployment rate declines, dating back to February 2011. If these trends continue, unemployment should fall below six percent in 2016.

The Federal Housing Finance Agency has released the latest data for their House Price Index through the second quarter of the year. The current index reading for Nevada is up 14.8 percent relative to 2013:IIQ, and up 53 percent relative to the trough. While the year-over-year gain is down from the increases of 20-25 percent observed over the past two years, it is still the strongest advance in the nation. To give this some context, the national index experienced a peak-to-trough decline of 21 percent, while the Nevada index fell 60 percent. Nevada home prices climbed higher during the boom and fell harder during the bust. This indicates that Nevada home prices have been especially sensitive to the health of the economy, in both good times and bad.

All three of Nevada's metropolitan statistical areas experienced declines in their non-seasonally adjusted unemployment rates².

¹ Due to methodological differences between the Current Employment Statistics Program, from which monthly job estimates are derived, and the Local Area Unemployment Statistics Program, from which the unemployment rate is estimated, these apparent contradictions can arise when monthly comparisons are made.

² Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 6.6 percent in October, down from 7.0

Contrary to the employment changes reported above, the State's

Coincidentally, all three MSAs fell by 0.3 percentage points over the month. The Las Vegas-Paradise MSA reading of 6.8 percent is down 2.8 percentage points relative to last year's reading of 9.6 percent. This is the single largest unemployment rate decline, on a year-ago basis, on record for the Las Vegas MSA (with information going back to 1990). The Reno-Sparks unemployment rate fell 2.7 percentage points over the year, to 6.1 percent. This is the lowest October reading on record since 2007. Finally, unemployment in the Carson City MSA also fell by 2.7 percentage points relative to October 2013, to 6.8 percent. This is the largest year-over-year decline in the State Capitol's unemployment rate since March of 1999. It is of note that all 17 of Nevada's counties experienced sub-ten percent unemployment rates in September and October. The last time this was

rank has been steadily climbing. Depending on the measure used, Nevada has outperformed 48 other states in terms of employment growth of late. After a long delay, this strong employment growth has finally led to an accelerated decline in the State's unemployment rate. In 2005, Nevada ranked better than 34 other states in terms of unemployment rates. During the recession, Nevada's unemployment rate rose to the highest in the nation, where it stayed over the entire February 2010-October 2013 45-month period. Since October 2013, Nevada has started to see a reversal of this trend, with the State now ranking better than four other states as of September 2014.

Initial claims for unemployment insurance totaled 14,100 in October, a decline of nearly two percent from last year. This month, we take an

alternative approach to examining the health of the labor market by comparing the level of initial claims relative to the size of the workforce. Over the last 25 years, on average, there are 3 initial claims each week per thousand jobs in the State while the economy is growing steadily, with this number rising as high as 5.3 during the Great Recession, and as low as 2.1 during the housing boom in the last decade. This measure

corresponds to the number of layoffs relative to the total number of jobs in the State, with a high number revealing that an unusually high number of people are losing their

the case occurred in 2007.

As has been discussed in previous *Overviews*, Nevada's job growth

percent in September and down from 9.4 percent in October 2013.

jobs involuntarily, and a low number suggesting, among other things, that people who are leaving work are doing so voluntarily.

In 2014, this barometer has been slowly trending down, falling from 3.1 claims per thousand jobs in January to 2.9 in November, suggesting that the overall job churn in the State is consistent with steady economic growth, and neither at boom nor bust levels. Going forward, we should expect to see the general decline in initial claims, which have fallen over the year in 54 of the past 59 months, to begin to stabilize (and perhaps rise slightly) as claims activity is driven upward by a growing employment base in the State.

The Bureau of Labor Statistics collects data on alternative measures of labor underutilization, which allow us an insight into the unemployment experienced by disparate groups of workers. The U-3 measure, which averaged 8.3 percent in the year ending in 2014:IIIQ, is the total of unemployed workers as a percentage of the civilian labor force. This is most similar to the official rate, which measures 8.2 percent in this period. U-4 adds discouraged workers to U-3, bringing the underutilization level to 9.1 percent. Discouraged workers are those people who would like to work, but have stopped looking for work because they believe there are no jobs to be filled. Marginally attached workers, the addition to U-5, have not searched for work for

reasons other than belief that there are no jobs to fill, totaling ten percent. Finally, the U-6 measure adds part-time workers (working less than 35 hours per week) who would rather be working full-time, but cannot due to economic reasons including having their hours cut or being unable to find full-time work. This leads to a U-6 underutilization rate of 15.9 percent.

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	1,000	8,300	-7,300
Private Sector	-500	5,300	-5,800
Public Sector	1,500	3,000	-1,500
Las Vegas	1,500	6,800	-5,300
Reno	-1,200	2,200	-3,400
Carson City	0	0	0

The September 15th-October 15th period was recognized as Hispanic Heritage Month in the U.S. We took this as an opportunity to assess one aspect of the role of Hispanics in Nevada's economy. Specifically, the Bureau of Labor Statistics reports that Hispanics account for approximately 26 percent of the total labor force in Nevada. This equates to close to 360,000 individuals, based upon 2013 information. All told, the Hispanic share of the Silver State labor force is the fifth-highest in the nation. New Mexico, Texas, California, and Arizona each have higher shares. The Land of Enchantment leads the way with a 44 percent share.

The jobs data reported above all come from the Current Employment Statistics Program, which is based

largely upon a survey of employers. The Quarterly Census of Employment and Wages Program provides a complete count of jobs from unemployment insurance files. This data is more accurate, but comes with a considerable lag. Currently, information is available through the second quarter of this year. Each quarter when this data is released, economists in the Research and Analysis Bureau perform short-term industry employment projections. The current forecast horizon is through the fourth quarter of 2017.

Total employment in Nevada is projected to increase by 40,000-50,000 in each year of the forecast period. This will equate to year-over-year employment gains of 3.4 percent in 2015, 3.6 percent in 2016, and 3.8 percent in 2017. A great deal of the employment gains will be realized as a result of the Tesla battery manufacturing plant, which will be constructed and begin operations within the forecast horizon. As such, construction employment is projected to increase between 8,000 and 10,000 each year, with annual growth rates of 12.1 percent in 2015 and 2016, and 12.4 percent in 2017. Manufacturing employment is projected to continue its current growth until 2017, when production is tentatively slated to begin at the Tesla plant. This will result in a doubling of the growth rates in 2015 (2.3 percent) and 2016 (3.3 percent) to 6.2 percent in 2017.

Finally, with the announcement of two new mega-resorts on the Las Vegas Strip, the Genting project on

the site of the former Echelon project, and the Doumani project on the former site of the Clarion hotel, we project growing employment in the leisure and hospitality sector. Over the forecast period, we expect annual employment gains between 12,000 and 13,000, leading to employment growth rates of approximately four percent each year.
