DETR's RESEARCH AND ANALYSIS BUREAU
CHIEF ECONOMIST BILL ANDERSON

PRESS RELEASE

For Immediate Release
Oct. 17, 2014

Nevada's Unemployment Rate Ticks Down to 7.3 Percent

Carson City, NV —Nevada's unemployment rate fell to a seasonally adjusted 7.3 percent in September, the lowest it has been since July 2008.

"I am pleased to see the Silver State's unemployment rate continue to show improvement. We are growing in key economic sectors and more Nevadans are once again finding good jobs," said Governor Brian Sandoval. "Our economy is showing positive signs, but we must remain diligent in our economic and workforce development efforts."

The non-seasonally adjusted unemployment rate showed improvement for Nevada's metro areas on a year over year basis, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation.

The largest decline occurred in the Las Vegas-Paradise MSA which fell 2.6 percent percentage points from last September, to 7.1 percent. The rate decreased from 7.7 percent in August. Similarly, the Reno-Sparks MSA fell 2.5 percentage points from last September with an over the month decrease of 0.5 to 6.4 percent. The Carson City MSA rate fell to 7.1 percent in September, down from August's 7.5 percent. The Carson City MSA fell 2.4 percentage points over the year.

Nevada's seasonally adjusted employment increased on a year-over-year basis for the 45th month in a row in September, to 1.22 million, though it did fall month-over-month by 1,800, Anderson said. Year-over-year, employment increased by more than 38,000 jobs, the third-highest reading since November 2008.

"Through the first nine months of this year, job levels are trending a bit in excess of 40,000 higher than a year ago," Anderson said. "Should these trends hold through the rest of the year, we will have added about 100,000 new jobs over the 2010-2014 period. To put these gains in perspective, the State lost about 175,000 jobs over the 2007-2010 period."

Construction continues to lead the state in terms of percentage growth, up 12.8 percent over the year. The state's largest industry, leisure/hospitality, added 4,100 jobs to payrolls, relative to last September, up 1.3 percent. The only sectors to lose year-over-year employment this month are mining, down 200 jobs, and government, down 600 jobs, Anderson added.

NEVADA LABOR MARKET OVERVIEW September 2014

With data through the first half of the year, the national Gross Domestic Product has risen in each of the past 18 quarters. In 2014:IIQ, GDP is up 2.6 percent relative to a year ago. This has set the stage for continuing improvement, despite some volatility from month-to-month, in the labor market in Nevada, which bottomed out in 2010.

Nevada's seasonally adjusted employment increased on a year-over-year basis for the 45th month in a row in September, to 1.22 million, though it did fall month-over-month by 1,800. Generally in September, we would expect an increase in employment of 8,600 over the August reading (not seasonally adjusted). This month, however, employment rose by 6,800,

leading to the seasonally adjusted monthly decline noted above. On a year-ago basis, employment increased by more than 38,000 jobs. Further, this is the third-highest reading since November 2008.

All but two of Nevada's supersectors added employment on a year-ago basis in September. Construction continues to lead the state in terms of percentage growth, up 12.8 percent over the year. The State's largest industry, leisure/hospitality, added 4,100 jobs to payrolls, up 1.3 percent. The largest nominal changes belong to professional/business services and trade/transportation/utilities,

| Nevada and Sub-State Nonfarm Jobs: Aug. - Sept. Change | | | |
|--|-------------------|----------------------------|----------------------------|
| | Unadjusted Change | Expected Seasonal Movement | Seasonally Adjusted Change |
| Total Nonfarm Jobs | 6,800 | 8,600 | -1,800 |
| Private Sector | 0 | 2,000 | -2,000 |
| Public Sector | 6,800 | 6,600 | 200 |
| Las Vegas | 5,900 | 6,600 | -700 |
| Reno | 2,500 | 1,100 | 1,400 |
| Carson City | -200 | -100 | -100 |

which added 8,800 and 8,700 jobs over the year, respectively. The only sectors to lose year-over-year employment this month are mining, down 200 jobs, and government, down 600 jobs.

With the approaching holiday-related

uptick in retail/wholesale trade and transportation activity, this month we examine the likely impacts on hiring. In the years prior to the recession, September-December increases in holiday-related seasonal jobs approached 10,000 in Nevada. During the recession and early stages of recovery, seasonal gains eased noticeably. However, more recently, holiday-related job growth has picked up in these industries. For instance, in 2013, seasonal employment in these industries rose by an estimated 13,500 from September through December. In that the economy has strengthened further from a year ago, our hope is to at least match

2013's holiday-related seasonal gains.

Employment in all three of Nevada's metropolitan statistical areas increased this month, on a year-ago basis. The Reno/Sparks MSA added 7,400 jobs, up 3.7 percent. Las Vegas added 23,000, for an annual growth rate of 2.7 percent. Finally, the Carson City MSA is up by 100 jobs, or 0.1 percent.

As the economic recovery has unfolded, unemployment has declined noticeably. September's 7.3 percent unemployment rate, seasonally adjusted, is the lowest rate since June of 2008, and is well off of the recessionary high of 13.8 percent recorded for all of 2010. During that same year, the number of unemployed Nevadans peaked at 192,000. Through the first three quarters of this year, unemployment has averaged 110,000.

Unemployment rates have declined in every county in Nevada as the recovery has unfolded. Comparisons of the most current unemployment rates to those from September 2010 highlight the extent of decline. In the State as a whole, September's jobless rate is just 51 percent of the rate four years prior, suggesting that the jobless rate has been cut nearly in half.

At the county-level, the most pronounced (proportionate) decline occurred in Esmeralda County, where the September 2014 rate is 45 percent of the 2010 reading. Unemployment rates in four other counties—Lyon, Douglas, Washoe, and Clark—are between 50 percent and 55 percent of their 2010 readings. Declines in Eureka, Mineral, and Lincoln Counties have been less pronounced, as current readings are between 70 and 80 percent of September 2010 rates.

Although it remains problematic, long-term unemployment is on the mend. At its worst near the height of the recession, the number of

Nevadans unemployed for at least 27 weeks peaked in excess of 90,000. Over the past 12 months, the number of long-term unemployed in the Silver State has averaged about 45,000 per month, roughly half of the recessionary high. To add some historical perspective, however, and to highlight the fact that room still remains for improvement, prior to the economic downturn, long-term unemployment in Nevada was less than 10,000.

The non-seasonally adjusted unemployment rate¹ fell on a year-over-year basis in each of Nevada's metropolitan statistical areas (MSAs) this month. The largest decline occurred in the Las Vegas-Paradise MSA, which fell 2.6 percentage points from last September, to 7.1 percent.

The Reno-Sparks MSA fell 2.5 percentage points over the year, leading to an unadjusted unemployment rate of 6.4 percent. Finally, the Carson City MSA fell by 2.4 points over the year to 7.1 percent.

The job growth figures typically reported in our *Overview* represent the net effect of thousands of individual labor market "transactions." In any given quarter,

¹ Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 7 percent in September, down from 7.5 percent in August and down from 9.5 percent in September 2013.

in excess of 100,000 jobs may be gained and/or lost in Nevada. The Bureau of Labor Statistics' Business Employment Dynamics (BED) series offers insight into these transactions and allows us to examine gross job gains and losses from a variety of different perspectives, albeit on a lagged basis, and provides insight into labor market "churn."

For instance, in 2013:IVQ, there were 63,800 gross job gains in expanding establishments in Nevada's labor market. At the same time, there were 53,600 gross job losses in contracting establishments, for a net gain of 10,200 jobs. This represents the 13th consecutive quarter of a net gain in jobs.

BED information also allows us to take a detailed look at labor market churn related solely to business establishment openings and closings. During last year's final quarter, 11,000 jobs were added as a result of new business openings. On the flip side, business closings resulted in the loss of 8,400 jobs. The end result was a net gain of more than 2,600 jobs due solely to business openings/closings. New jobs due to openings have exceeded job losses from closings for nine consecutive quarters.

The Governor's Office of Economic Development recently reported that nearly 2,300 jobs were created as a result of State economic development efforts in the first half of 2014. Recent BED trends, as they

relate to gross job gains in expanding or opening establishments, certainly are consistent with these results.

This month, we conclude our recent analyses of small business trends in Nevada by focusing solely on those worksites with less than 100 workers. As of the first quarter 2014, employment in firms with less than 100 employees totaled 558,000. This comes up about 27,000 short of the pre-recession peak in 2007:IVQ. At its lowest point (2010:IQ), there were only 510,000 workers in this size category. From peak to trough nearly 75,000 jobs were lost due to the recession.

All told, since its lowest point, there has been a steady trend of employment growth, resulting in 47,000 jobs being re-gained. In the past year, nearly 20,000 jobs have been added. As an aside, five industries account for one fifth of small business employment: full-service restaurants, limited-service restaurants, physicians' offices, supermarkets, and managing offices.

With information through the first three quarters of this year, now is an opportune time to assess our progress during the recovery period, as it pertains to job gains. Available evidence suggests that Nevada's labor market bottomed out in 2010. In 2011, job growth, once again, turned positive. Specifically, nearly 12,000 private sector jobs were added in our first year of recovery. 2012 brought with it an additional 20,000 jobs, followed by another 29,000 private sector jobs last year.

Through the first nine months of this year, job levels are trending a bit in excess of 40,000 higher than a year ago. Should these trends hold through the rest of the year, we will have added about 100,000 new jobs over the 2010-2014 period. To put these gains in perspective, the State lost about 175,000 jobs over the 2007-2010 period.

In order to look at recent labor market movements from another point of view, we can consider the information obtained through the Quarterly Census of Employment and Wages (QCEW) Program, which provides a nearly complete job count based upon quarterly wage records submitted by employers whose employees are covered under the Unemployment Insurance System. Because generating this information is a time-consuming process, it is only available with a 4-5 month lag. Examining this information over time, and for all 50 states (plus the District of Columbia), highlights Nevada's relative performance during the pre-recessionary boom, through the downturn, and into the recovery.

In the years preceding the economic downturn, Nevada led the country in private sector employment growth, with the highest employment growth rate in the country in 2004 and the second highest in 2005 (6.4 percent each year). Conversely, during the recession, Nevada was the most affected state in terms of private sector employment growth. In fact, Nevada's employment growth was the lowest in the nation in 2009 (-10.1 percent) and 2010 (-2.8 percent). Looking at the first three years of the recovery, Nevada's private sector has been steadily climbing back to the top. In 2011 the private sector outgrew 14 other states with a growth rate of 1.2 percent. Then in 2012, growth in the private sector accelerated to 1.9 percent, which put Nevada ahead of 24 states. In 2013 the private sector grew at a rate of 2.7 percent, a larger growth rate than 38 other states.

When we consider the latest available data, through the first quarter of this year, Nevada's private sector is growing at 3.6 percent relative to the same period in 2013, making it the state with the third-fastest growing private sector in the nation.

As the labor market recovery in Nevada has unfolded, there has been much debate concerning the so-called "quality" of new jobs. This month, we contribute to this discussion via an examination of the issue from the perspective of full-time vs. part-time employment. We are aware of only one source of information that can be used to

highlight trends in the full- and part-time employment status of Nevadans...the Census Bureau's monthly Current Population Survey. In the Silver State, about 900 households are surveyed monthly to, at least in part, quantify the labor market status of Nevadans.

As the recession took hold on the State's economy, the number of Nevadans employed full-time tumbled noticeably. All told, the rolls of full-time employees fell by about 230,000 from peak to trough, bottoming out at about 830,000. Over roughly the same time, part-time employment increased by nearly 90,000 to a bit over 300,000.

As the recovery unfolded, these trends have reversed themselves. Full-time employment is, once again, on the rise, averaging about 975,000 over the past year. Part-time employment of Nevadans has declined slightly and is holding relatively steady at around 290,000.

In sum, available evidence suggests that the employment gains in Nevada in recent years have been heavily concentrated in full-time positions, as opposed to part-time.

Some are concerned that employers will cut back positions in response to the Affordable Care Act. Employers near the 50 full-time equivalent threshold may find it less expensive to stay below that level than to provide health care. Anecdotal evidence concerning the extent to which this is actually happening can be obtained by examining the employment records that nearly all

Nevada employers must submit in compliance with unemployment insurance laws.

Over 60,000 unique business establishment records were examined with the vast majority (56,500) of businesses staying either above or below the 50 employee threshold between 2013:IQ and 2014:IQ. About 271 establishments fell below 50 employees when they were above a year earlier, and about 345 establishments rose above the 50 employee mark when they were below a year earlier. (It should be noted that the ACA threshold refers to full-time equivalent employees. Employers in Nevada do not report hours worked in submitting unemployment insurance records, hence, an FTE count cannot be calculated.)
